## **Compact Direct Operated**2/3 Port Solenoid Valve for Chemicals

## Series LVM09/090

## **Specifications**

| LVM09R3       LVM09R4       LVM09SR         Valve construction       Diaphragm type direct operated poppet (Rocker type         Valve type       N.C.       N.O.       Universal         Number of ports       2       3         Fluid Note 1)       Air, Water, Pure water, Diluent, Cleaning solvent         Operating pressure range       -75 kPa to 0.2 MPa         Orifice diameter       1.1 mm         Response time       10 ms or less (at pneumatic pressure)         Leakage       Zero leakage, either external or internal (at water pressure)         Proof pressure Note 2)       0.3 MPa         Ambient temperature       0 to 50°C         Fluid temperature       0 to 50°C (with no condensation)         Volume of valve chamber Note 3)       18 μ/         Mounting orientation Note 4)       Free         Enclosure       IP40 or equivalent         Weight       20 g         Rated voltage       12, 24 VDC         Allowable voltage fluctuation Note 5)       ±10% of rated voltage | Model  |                           | Base mounted |   |         |           |  |

## Flow Characteristics

| Water                   | Air   |      |     |
|-------------------------|-------|------|-----|
| Av                      | Cv    | С    | b   |
| 0.43 x 10 <sup>-6</sup> | 0.018 | 0.06 | 0.2 |

<sup>\*</sup> The values of Av and Cv are based on JIS B 2005:1995, C and b are based on JIB B 8390:2000.

Note 1) Select an appropriate material for the wetted part when fluid such as a cleaning solvent is used. Also, be sure to confirm the fluid compatibility in advance.

Note 2) Indicates the pressure which does not generate breakage, cracks or external leakage after a one-minute airtight test.

Note 3) Indicates the volume of clearance inside the valve chamber after the volume of the diaphragm is subtracted.

Note 4) Since the body (orifice shape) is designed to eliminate residual liquid, mounting in a vertical direction with the coil at the top is recommended. When residual liquid is not considered, any mounting orientation is available.

Note 5) When the response speed is regarded as important, prevent negative fluctuation of the voltage by adequate regulation.

Note 6) The value is based on SMC's measurement conditions. The noise level will vary with conditions.

Note 7) Refer to 10 in "Design and Selection" on the back of page 2, if the valve is to be energized continuously for extended periods of time.
