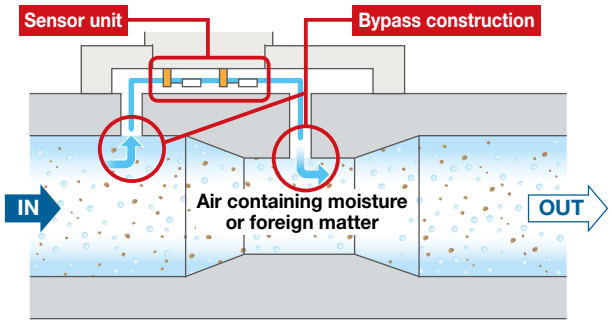
Improved resistance to moisture and foreign matter

The bypass construction reduces the moist air or foreign matter in contact with the sensor, reducing sensor accuracy deterioration and damage.



∗ The figure shows the PF3A703/6/12H(-L).

Through bore construction *1

- **Pressure loss: 75% reduction** *2 (20 kPa → 5 kPa)
- **Maintenance-free fluid passage**

∗1 Excludes the modular type
∗2 Compared with the existing model (PF2A7□H/ Large flow type)

New Can be used with carbon dioxide and argon, in addition to air and nitrogen

∗ It is possible to select the gas in settings.

∗ For the modular type, check the fluid in use with the AC-D connected component.

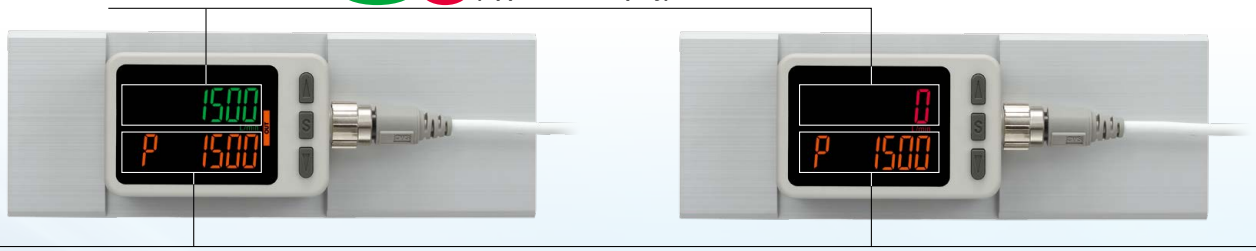
3-color/2-screen display

∗ 2-screen display: 2-row display of main screen and sub screen

Upper Main display: Green At set point

Upper Main display: Red At set point

Instantaneous flow rate Green Red (Upper Main display)



Set value Orange (Lower Sub display)

The lower/sub display can be changed by pressing the up/down buttons.

∗ Either "Input of line name" or "Display OFF" can be added via the function settings.

New Expanded the set point range/display range

It is possible to display/set a range of up to **150%** of the rated flow range.

∗ Existing model: 105%
∗ For a list of setting ranges for each series, refer to the "Flow Range" table on page 24.

Grease-free

Smallest settable increment

2 L/min ∗ For the PF3A703H

∗ 5 L/min for the existing model (PF2A703H/Large flow type)

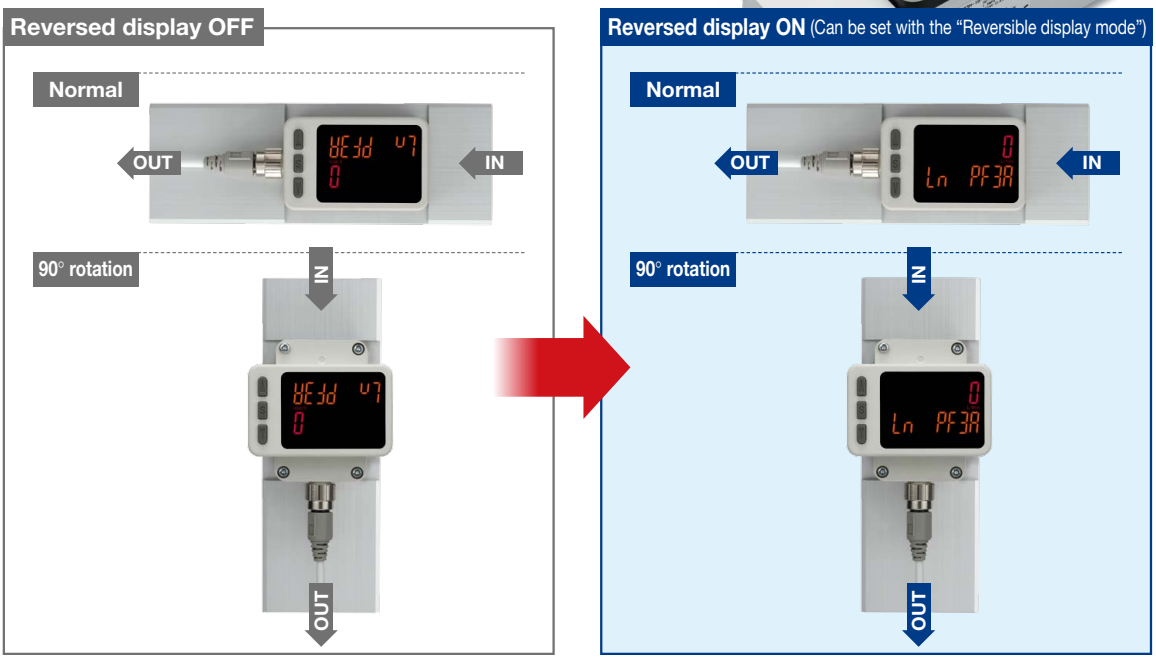
Display rotates 90° and can be reversed.

Clockwise 90° **Easy operation, improved visibility**

The display can be rotated in increments of 90° according to the installation. The display can be reversed for easy operation.

* Excludes the PF3A7/8R5H, 7/804H, and 7/808H

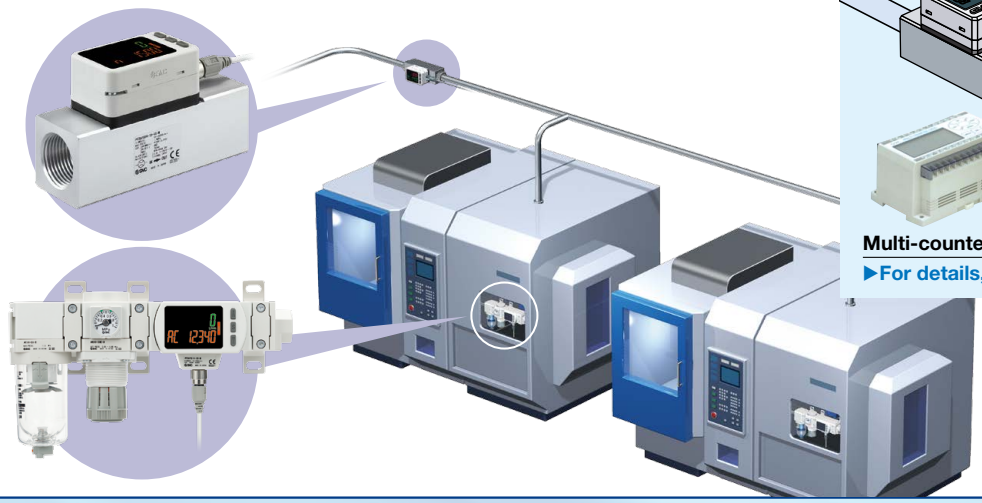
Installation Example



Select a digital flow switch to increase energy savings

Flow control is necessary for promoting energy saving in any application. Saving energy starts from numerical control of the flow consumption of equipment and lines and clarification of the purpose and effect.

- **Digital display allows visualization.**
- **3-color, 2-screen/4-screen display, Improved visibility**
- **Remote control of the consumption flow rate is possible with accumulated pulse.**



Energy Saving Program

▶For details, refer to the Web Catalog.

New Accumulated pulse conversion value: Select from **4 types** based on the flow range

Accumulated pulse width: Select a setting between **50 to 100 ms**

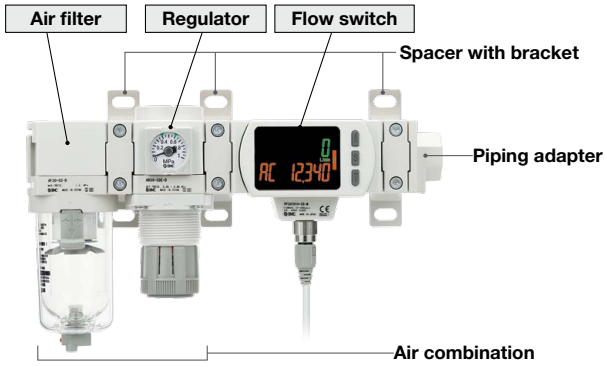
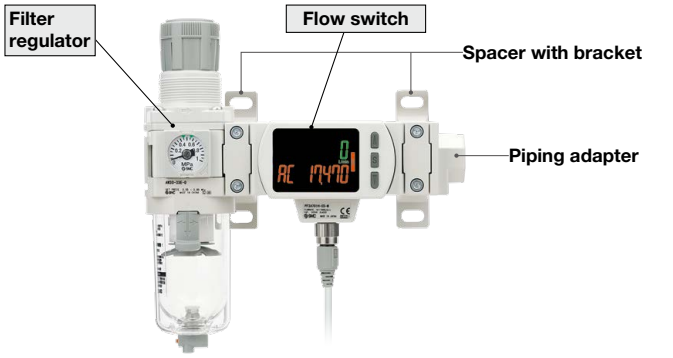
Products do not come assembled.
They should be ordered separately and assembled by the customer.

For the AC30B-D + PF3A701H



For the AW30-D + PF3A701H



Simple Specials System

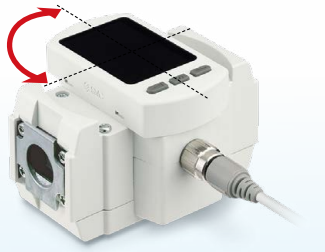
Unit with F.R.L is available with the simple special ordering system.
The lead time is almost the same as the standard product.

Please contact your local sales representative for more details.

A right to left (-R) flow direction is also available.

90° rotation

* Excludes the PF3A7/8R5H, 7/804H, and 7/808H



The flow switch can be installed/removed without removing the piping.

Reduced maintenance time for inspection, cleaning, replacement, etc.

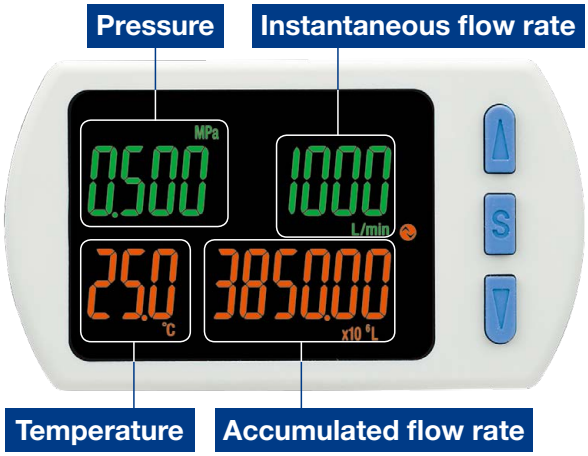
Simultaneous measurement of the instantaneous flow rate, accumulated flow rate, pressure, and temperature



Pressure sensor

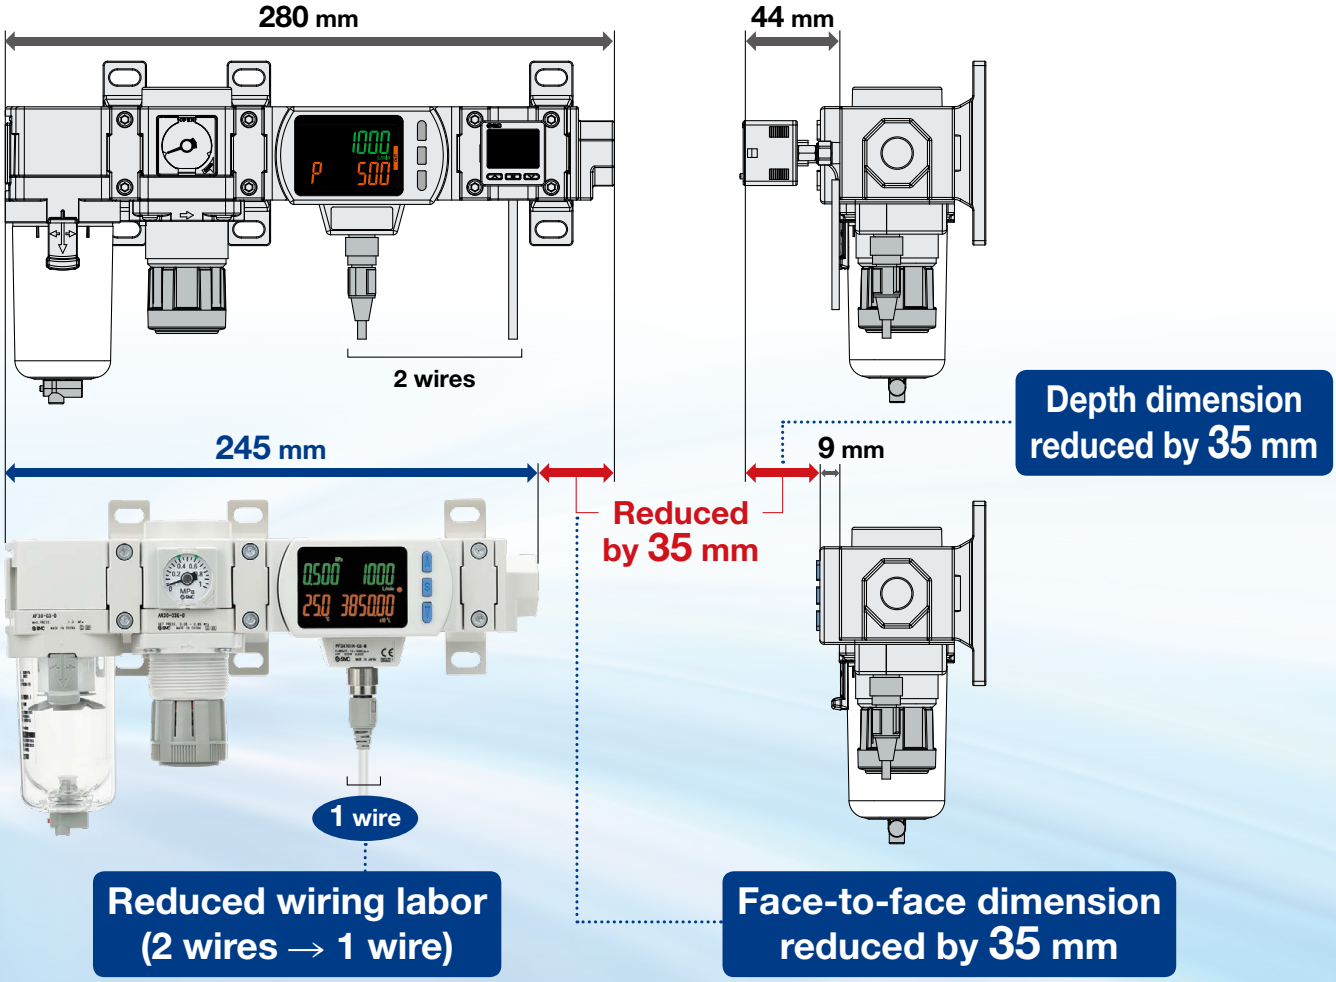
Rated pressure range: 0 to 1 MPa

Temperature sensor

Rated temperature range: 0 to 50°C

Space-saving design, Reduced labor

Both the flow rate and pressure can be measured with 1 product.
The installation of a digital pressure switch and a cross spacer is not necessary, thus reducing the face-to-face and depth dimensions. In addition, only 1 cable is required for wiring. This reduces the required installation space, piping, and wiring work.



IO-Link Compatible PF3A□□H-□□-L□-□□ p. 15

Supports the IO-Link communication protocol

IO-Link is an open communication interface technology between the sensor/actuator and the I/O terminal that is an international standard: IEC 61131-9.

Implement diagnostic bits in the process data.

The diagnostic bit in the cyclic process data makes it easy to find problems with the equipment. It is possible to find problems with the equipment in real time using the cyclic (periodic) data and to monitor such problems in detail with the noncyclic (aperiodic) data.

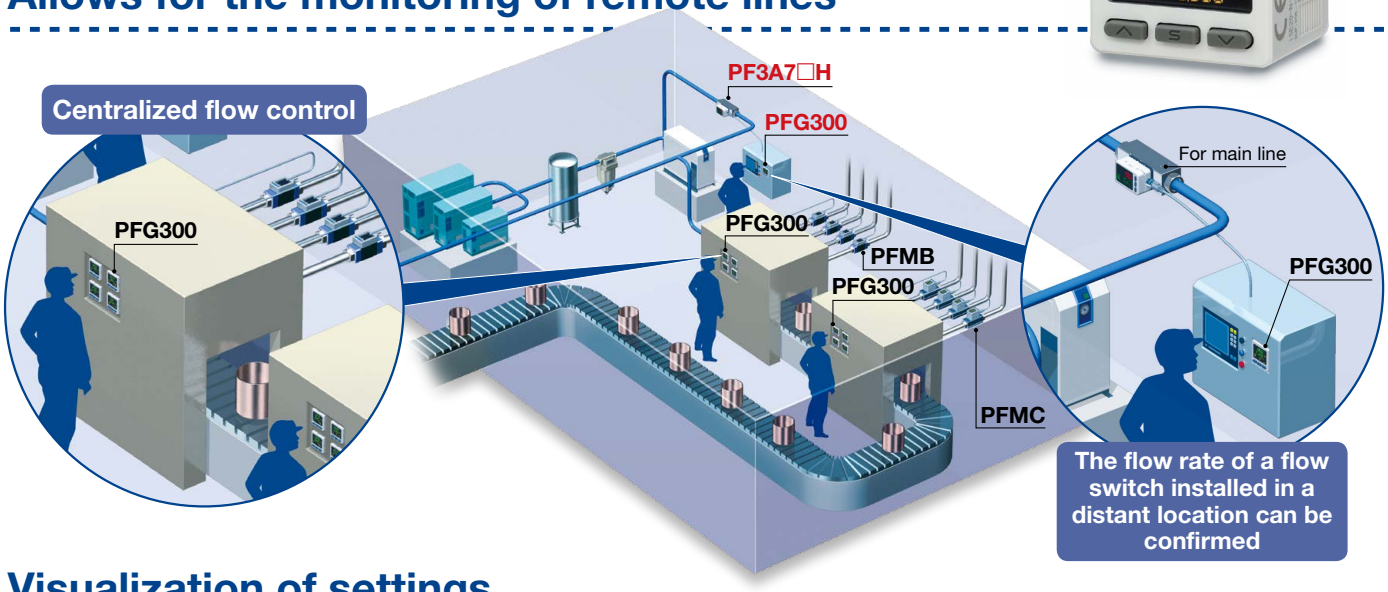
3-Screen Display Digital Flow Monitor

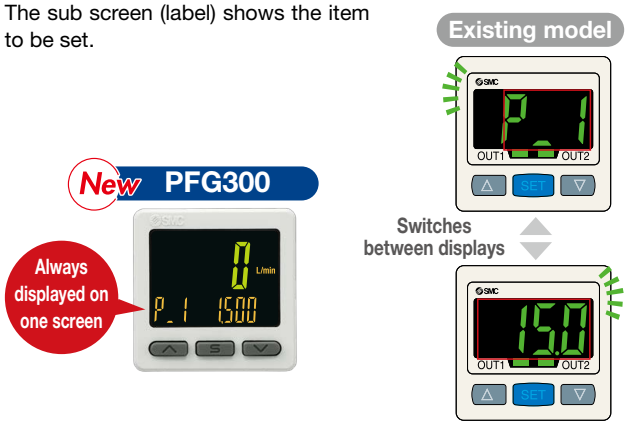
PFG300 Series p. 37

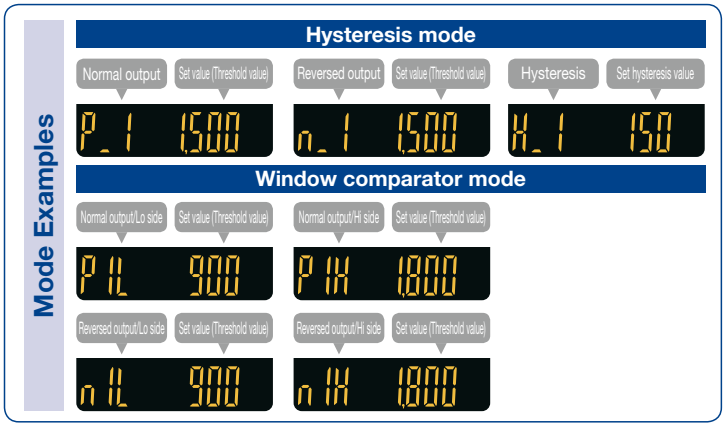
Allows for the monitoring of remote lines



Visualization of settings

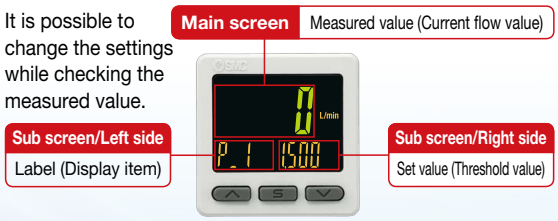
The sub screen (label) shows the item to be set.



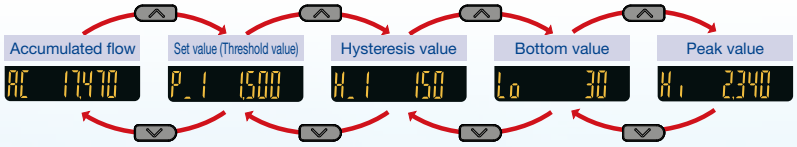


Easy screen switching

It is possible to change the settings while checking the measured value.



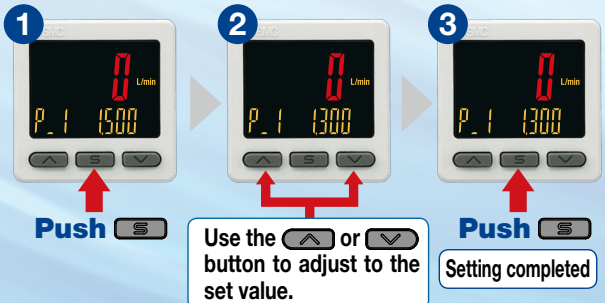
The sub screen can be switched by pressing the up/down buttons.



* Either “Input of line name” or “Display OFF” can be added via the function settings.

Simple 3-step setting

When the S button is pressed and the set value (P_1) is being displayed, the set value (threshold value) can be set. When the S button is pressed and the hysteresis (H_1) is being displayed, the hysteresis value can be set.



With a snap shot function for set value reading

Pressing the ▲ and ▼ buttons simultaneously for a minimum of 1 second will make the set value (threshold value) the same as the current flow value.

*1 The air quality class is according to JIS B 8392-1:2012 [6:6:4] and ISO8573-1:2010 [6:6:4]. Use an air filter with 5 μm or less filtration rating on the inlet side.
*2 Set point range will change according to the setting of the zero cut-off function.
*3 When using the accumulated value hold function, use the operating conditions to calculate the product life, and do not exceed it. The maximum update limit of the memory device is 1.5 million times. If the product is operated 24 hours per day, the product life will be as follows:
・5 min interval: life is calculated as 5 min x 1.5 million = 7.5 million min = 14.3 years
・2 min interval: life is calculated as 2 min x 1.5 million = 3 million min = 5.7 years
If the accumulated value external reset is repeatedly used, the product life will be shorter than the calculated life.
*4 When the pressure range is 1.0 to 1.5 MPa, the pressure characteristics will be ±5% F.S. (standard pressure is 0.5 MPa). Do not release the OUT side piping port of the product to the atmosphere without connecting piping. If the product is used with the piping port released to atmosphere, accuracy may vary.
*5 The accuracy value is based on air as a fluid. For other fluids, it is a reference value.
*6 The time from when the flow is changed by a step input (when the flow rate changes from 0 to the maximum value of the rated flow range instantaneously) until the switch output turns ON (or OFF) when set to be 90% of the rated flow rate
*7 If the flow fluctuates around the set value, the width for setting more than the fluctuating width needs to be set. Otherwise, chattering will occur.
*8 Analog output or external input can be selected by pressing the buttons. Refer to the graph for analog output.
*9 When selecting 0 to 10 V, refer to the analog output graph for the allowable load current.
*10 The time from when the flow is changed by a step input (when the flow rate changes from 0 to the maximum value of the rated flow range instantaneously) until the analog output reaches 90% of the rated flow rate
*11 Analog output or external input can be selected by pressing the buttons.
*12 The flow rate given in the specifications is the value under standard conditions.
*13 Setting is only possible for models with the units selection function.
*14 Display range will change according to the setting of the zero cut-off function.
*15 The accumulated flow display is the upper 6-digit and lower 6-digit (total of 12 digits) display. The upper 6 digits and the lower 6 digits are displayed alternately, with "x 10^6" lighting up when the upper digits are displayed.
* Products with tiny scratches, marks, or display color or brightness variations which do not affect the performance of the product are verified as conforming products.

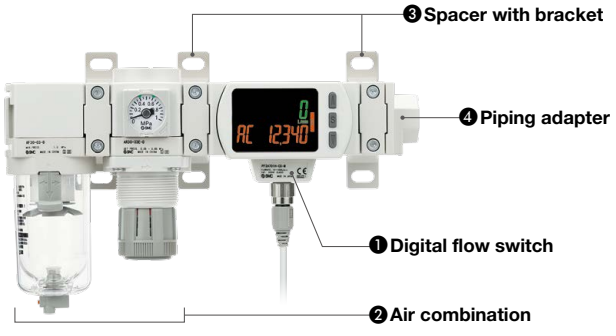
Caution on Mounting

Pipe threads are not provided for this product. If the product is to be used as a single unit, order a spacer (or spacer with bracket) and a piping adapter separately. Refer to page 35 for details on attachments.

Assembly Example



∗ Avoid mounting the lubricator on the inlet side.
∗ If a pressure relief 3-port valve is installed on the inlet side of the digital flow switch, causing a backflow of air, the measured value will change.

Assembly example

- ❶Digital flow switch PF3A701H-CS-M ····· 1 pc.
- ❷Air combination AC30B-03E-D ····· 1 pc.
- ❸Spacer with bracket Y300T-D ····· 2 pcs.
- ❹Piping adapter E300-03-D ····· 1 pc.

Products do not come assembled. They should be ordered separately and assembled by the customer.

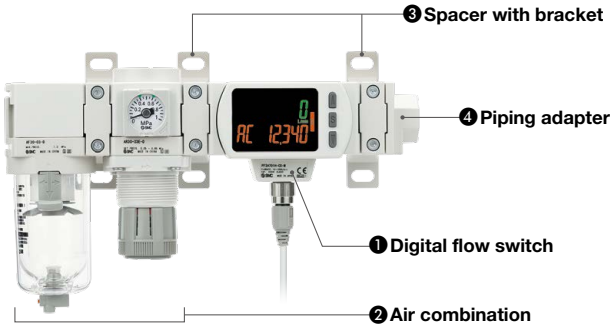
Caution on Mounting

Pipe threads are not provided for this product. If the product is to be used as a single unit, order a spacer (or spacer with bracket) and a piping adapter separately. Refer to page 35 for details on attachments.

Assembly Example



* Avoid mounting the lubricator on the inlet side.
* If a pressure relief 3-port valve is installed on the inlet side of the digital flow switch, causing a backflow of air, the measured value will change.

*1 The air quality class is according to JIS B 8392-1:2012 [6:6:4] and ISO 8573-1:2010 [6:6:4]. Use an air filter with 5 μm or less filtration rating on the inlet side.

*2 Set point range will change according to the setting of the zero cut-off function.

*3 When using the accumulated value hold function, use the operating conditions to calculate the product life, and do not exceed it. The maximum update limit of the memory device is 1.5 million times. If the product is operated 24 hours per day, the product life will be as follows:
- 5 min interval: life is calculated as 5 min x 1.5 million = 7.5 million min = 14.3 years
- 2 min interval: life is calculated as 2 min x 1.5 million = 3 million min = 5.7 years

If the accumulated value external reset is repeatedly used, the product life will be shorter than the calculated life.

*4 The accuracy value is based on air as a fluid. For other fluids, it is a reference value.

*5 The value when connecting a product with a port size of 1/4 (PF3A8R5H), 3/8 (PF3A801H), 1/2 (PF3A802H), or 1 (PF3A804H, PF3A808H)

*6 In the low flow rate range, the temperature value fluctuates (rises). Refer to the "Temperature Accuracy" graph on page 28.

*7 Do not release the OUT side piping port of the product to the atmosphere without connecting piping. If the product is used with the piping port released to atmosphere, accuracy may vary.

*8 The value when the port size of the modular product is 1/4 (PF3A8R5H), 3/8 (PF3A801H), 1/2 (PF3A802H), or 1 (PF3A804H, PF3A808H) and the product is operated at a supply pressure of 0.5 MPa

*9 The time from when the measured value reaches the set value to when the switch output operates can be set.

*10 If the measured value fluctuates around the set value, the width for setting more than the fluctuating width needs to be set. Otherwise, chattering will occur.

*11 The flow rate given in the specifications is the value under standard conditions.

*12 Setting is only possible for models with the units selection function.

*13 Display range will change according to the setting of the zero cut-off function.

*14 The time for the digital filter can be set to the sensor input. The response time indicates when the set value is 90% in relation to the step input.

* Products with tiny scratches, marks, or display color or brightness variations which do not affect the performance of the product are verified as conforming products.

< Temperature Measurement >
When there is no (low) fluid flow, the heat of the platinum sensor heated for flow detection is transmitted to the temperature sensor, so the temperature measurement value in the low flow range (less than 10% of the rated flow rate) tends to increase in relation to the fluid temperature.

< Detection Principle (Flow) >
When a heated platinum sensor is installed in the branch passage, and fluid flows through it, the fluid removes heat from the platinum sensor. The resistance value of the platinum sensor decreases as it loses heat. As the resistance value decrease ratio has a uniform relationship to the fluid flow, the flow rate can be detected by measuring the resistance value.

Piping Adapter: 1/8, 1/4, 3/8, 1/2, 3/4, 1, 1 1/4, 1 1/2

A piping adapter allows for the installation/removal of the component without removing the piping and thus makes maintenance easier.

		Accumulated flow	0 to 999,999,999,990 L			0 to 999,999,999,990 L	0 to 999,999,999,900 L	
	Smallest settable increment	Instantaneous flow	1 L/min			2 L/min	5 L/min	10 L/min
		Accumulated flow	10 L			10 L	100 L	
	Accumulated volume per pulse (Pulse width = 50 ms)		1 L/pulse	10 L/pulse		10 L/pulse	100 L/pulse	
	Accumulated value hold function*3		Intervals of 2 or 5 minutes can be selected. The stored accumulated flow is held even when the power supply is OFF.					
Electrical	Power supply voltage		12 to 24 VDC ±10% (24 VDC when the PF3A7□H is connected)					
	Current consumption		25 mA or less					
	Protection		Polarity protection					
Accuracy	Display accuracy		±0.5% F.S. ± Minimum display unit (Ambient temperature of 25°C)					
	Analog output accuracy		±0.5% F.S. (Ambient temperature of 25°C)					
	Repeatability		±0.1% F.S. ± Minimum display unit					
	Temperature characteristics		±0.5% F.S. (Ambient temperature: 0 to 50°C, 25°C standard)					
Switch output	Output type		Select from NPN or PNP open collector output.					
	Output mode		Select from Hysteresis, Window comparator, Accumulated output, Accumulated pulse output, Error output, or Switch output OFF modes.					
	Switch operation		Select from Normal or Reversed output.					
	Max. load current		80 mA					
	Max. applied voltage (NPN only)		30 VDC					
	Internal voltage drop (Residual voltage)		NPN output: 1 V or less (at load current of 80 mA), PNP output: 1.5 V or less (at load current of 80 mA)					
	Response time*2		3 ms or less					
	Delay time*2		Select from 0.00, 0.05 to 0.1 s (increment of 0.01 s), 0.1 to 1.0 s (increment of 0.1 s), 1 to 10 s (increment of 1 s), 20 s, 30 s, 40 s, 50 s, or 60 s.					
	Hysteresis*4		Variable from 0					
	Protection		Short circuit protection					
Analog output*5	Output type		Voltage output: 1 to 5 V, 0 to 10 V (only when the power supply voltage is 24 VDC) Current output: 4 to 20 mA (0 L/min to maximum value of the rated flow)					
	Impedance	Voltage output	Output impedance: 1 kΩ					
		Current output	Maximum load impedance: 300 Ω (at power supply voltage of 12 V), 600 Ω (at power supply voltage of 24 VDC)					
	Response time*2		50 ms or less					
External input*6	External input		Input voltage: 0.4 V or less (Reed or Solid state) for 30 ms or longer					
	Input mode		Select from Accumulated value external reset or Peak/Bottom value reset.					
Sensor input	Input type		Voltage input: 1 to 5 VDC (Input impedance: 1 MΩ), Current input: 4 to 20 mA DC (Input impedance: 51 Ω) (0 L/min to maximum value of the rated flow)					
	Connection method		Connector (e-CON)					
	Protection		Over voltage protection (Up to 26.4 VDC)					
Display	Display mode		Select from Instantaneous flow or Accumulated flow.					
	Unit*7	Instantaneous flow	L/min, cfm (ft³/min)					
		Accumulated flow	L, ft³, L x 10⁶, ft³ x 10⁶					
	Display range	Instantaneous flow	–25 to 525 L/min	–50 to 1050 L/min	–100 to 2100 L/min	–150 to 3150 L/min	–300 to 6300 L/min	–600 to 12600 L/min
		Accumulated flow*9	0 to 999,999,999,990 L			0 to 999,999,999,990 L	0 to 999,999,999,900 L	
	Minimum display unit	Instantaneous flow	1 L/min			2 L/min	5 L/min	10 L/min
		Accumulated flow	10 L			10 L	100 L	
	Display type		LCD					
	Number of displays		3-screen display (Main screen, Sub screen)					
	Display color		1) Main screen: Red/Green, 2) Sub screen: Orange					
	Number of display digits		1) Main screen: 5 digits (7 segments), 2) Sub screen: 9 digits (7 segments)					
	Indicator LED		LED ON when switch output is ON. OUT1/2: Orange					
Digital filter*8			Select from 0.00, 0.05 to 0.1 s (increment of 0.01 s), 0.1 to 1.0 s (increment of 0.1 s), 1 to 10 s (increment of 1 s), 20 s, or 30 s.					
Environmental resistance	Enclosure		IP40					
	Withstand voltage		1000 VAC for 1 minute between terminals and housing					
	Insulation resistance		50 MΩ or more (500 VDC measured via megohmmeter) between terminals and housing					
	Operating temperature range		Operating: 0 to 50°C, Stored: –10 to 60°C (No condensation or freezing)					
	Operating humidity range		Operating/Stored: 35 to 85% RH (No condensation or freezing)					
Standards			CE/UKCA marking, UL (CSA)					
Weight	Body		25 g (Excluding the power supply/output connection lead wire)					
	Lead wire with connector		+39 g					

*1 Rated flow range of the applicable flow switch
*2 Value without digital filter (at 0.00 s)
*3 When using the accumulated value hold function, use the operating conditions to calculate the product life, and do not exceed it. The maximum access limit of the memory device is 1.5 million times. If the product is operated 24 hours per day, the product life will be as follows:
- 5 min interval: life is calculated as 5 min x 1.5 million = 7.5 million min = 14.3 years
- 2 min interval: life is calculated as 2 min x 1.5 million = 3 million min = 5.7 years

If the accumulated value external reset is repeatedly used, the product life will be shorter than the calculated life.
*4 If the flow fluctuates around the set value, the width for setting more than the fluctuating width needs to be set. Otherwise, chattering will occur.
*5 Setting is only possible for models with analog output.
*6 Setting is only possible for models with external input.
*7 Setting is only possible for models with the units selection function.
*8 The response time indicates when the set value is 90% in relation to the step input.
*9 The accumulated flow display is the upper 6-digit and lower 6-digit (total of 12 digits) display. When the upper digits are displayed, x 10⁶ lights up.
* Products with tiny scratches, marks, or display color or brightness variations which do not affect the performance of the product are verified as conforming products.
* For PF3A704H and PF3A708H, make a setting through input range selection.

⚠ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of **"Caution," "Warning"** or **"Danger."** They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

⚠ Danger : **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

⚠ Warning: **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

⚠ Caution: **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

*1) ISO 4414: Pneumatic fluid power - General rules and safety requirements for systems and their components
ISO 4413: Hydraulic fluid power - General rules and safety requirements for systems and their components

ISO 10218-1: Robots and robotic devices - Safety requirements for industrial robots - Part 1:Robots
etc.

⚠ Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. SMC products cannot be used beyond their specifications. They are not developed, designed, and manufactured to be used under the following conditions or environments. Use under such conditions or environments is not allowed.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Use for nuclear power, railways, aviation, space equipment, ships, vehicles, military application, equipment affecting human life, body, and property, combustion equipment, entertainment equipment, emergency shut-off circuits, press clutches, brake circuits, safety equipment, etc., and use for applications that do not conform to standard specifications such as catalogs and operation manuals.
3. Use for interlock circuits, except for use with double interlock such as installing a mechanical protection function in case of failure. Please periodically inspect the product to confirm that the product is operating properly.

⚠ Caution

SMC develops, designs, and manufactures products to be used for automatic control equipment, and provides them for peaceful use in manufacturing industries.
Use in non-manufacturing industries is not allowed.
Products SMC manufactures and sells cannot be used for the purpose of transactions or certification specified in the Measurement Act of each country. The new Measurement Act prohibits use of any unit other than SI units in Japan.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".
Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.*2)
   Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
   This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

*2) **Suction cups (Vacuum pads) are excluded from this 1 year warranty.**
A suction cup (vacuum pad) is a consumable part, so it is warranted for a year after it is delivered.
Also, even within the warranty period, the wear of a product due to the use of the suction cup (vacuum pad) or failure due to the deterioration of rubber material are not allowed by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

Revision History

Edition B
* The digital flow monitor PFG300 series has been added.
* Number of pages has been increased from 16 to 28.

Edition C
* IO-Link compatible products (PF3A7mH-L) have been added.
* The modular type has been added.
* Number of pages has been increased from 28 to 40.

Edition D
* The 4-screen display PF3A8 series has been added.
* Number of pages has been increased from 40 to 44.

Edition E
* 500 L/4000 L/8000 L types have been added to the modular type.
* The display range has been expanded. (1.5 times the rated flow range)

⚠ Safety Instructions	Be sure to read the "Handling Precautions for SMC Products" (M-E03-3) and "Operation Manual" before use.
