

Thermo-chiller

Environmentally Resistant Type

Protection of the electrical unit: 54

Resistant to dust and water splashing

The cooling capacity 5000 W (60 Hz) type has been newly added.

Metal panel

SNC

- The entire exterior surface is metal.
- A stainless steel panel can be selected. (Option)

Large capacity tank (3.17 gal)

• Increased circulating fluid recovery volume (Option)

Temperature stability: ±32.018°F

Ambient temperature: 41 to 113°F

With heating function

New

Environmentally friendly R410A as refrigerant

Model	Cooling capacity (60 Hz)	Temperature stability	Set temperature range	Size [inches]	
HRS018-R	1900 W				
HRS030-R	2900 W	±32.018°F (±0.1°C)	41 to 113°F (5 to 40°C)	W14.84 x H24.21 x D19.69	
New HRS050-R	5000 W			W14.84 x H38.42 x D23.31	

Compatible with power supplies in Europe, Asia, Oceania, and North, Central, and South America Single-phase 200 to 230 VAC (50/60 Hz)

030

Stainless steel panel specification (Option)

HRS-R Series

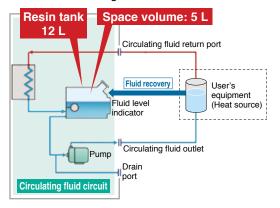

Protection of the electrical unit: IP54

The board and electric parts are located inside the electrical box, where they can be protected from dust particles and water splashing.

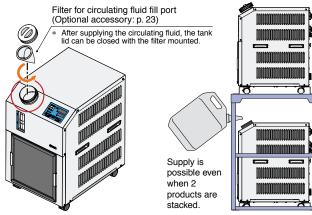

A large capacity tank is available. (Option)

For easier maintenance, the tank capacity for the return circulating fluid from the customer's equipment has been increased. Now, from the high level line on the tank, an extra 5 liters of circulating fluid can be contained.

Shaped for easy supply of circulating fluid

The angled supply port facilitates the easy supply of circulating fluid.

The entire panel is metal.

Easy cleaning of the tank

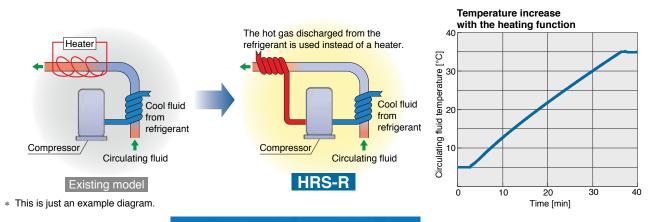

Large capacity tank (Option)

There is a separate opening (with a cap) for cleaning the tank behind the circulating fluid fill port. Opening diameter: ø110

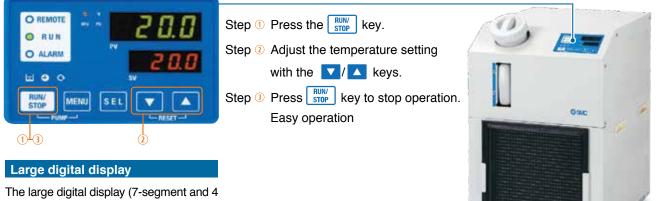

Circulating Fluid Temperature Controller Thermo-chiller Environmentally Resistant Type HRS-R Series

With heating function

Simple operation

The large digital display (7-segment and 4 digits) and 2-row display provide a clearer view of the current value (PV) and set value (SV).

Temperature and pressure units can be changed.

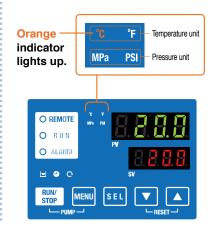

Unit conversion function

Timer operation function

- Timer for ON and OFF can be set in units of 0.5 h up to 99.5 h.
- Ex.) Can be set to stop on Saturday and Sunday and restart on Monday morning

Timer The time remaining can be checked.

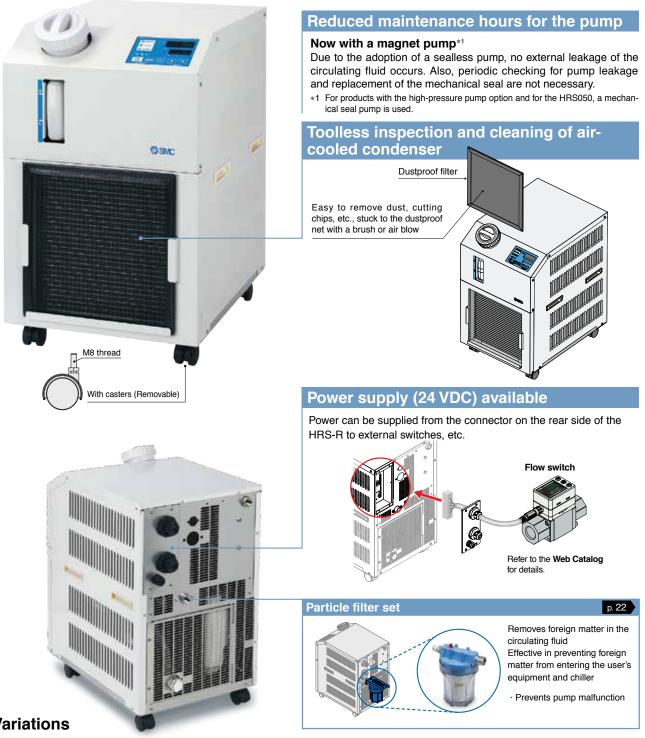

- **Power failure auto-restart function** Automatic restart after stoppage due to power failure, etc., is possible without pressing the without key, and remote operation is also possible.
- Anti-freezing operation function If the circulating fluid approaches its freezing point, for example, on a cold winter night, the pump operates automatically, and the heat generated by the pump warms the circulating fluid, preventing freezing.
- **Key-lock function** Can be set in advance to protect the set values from being changed by pressing keys by mistake.
- Function to output a signal for completion of preparation Notifies by communication when the temperature reaches the pre-set temperature range
- Independent operation of the pump

The pump can be operated independently while the chiller is powered off. This allows you to check for leakages in piping and to remove the air.

Circulating Fluid Temperature Controller Thermo-chiller Environmentally Resistant Type HRS-R Series

Variations

	HRS050-R	refrigeration	4500/5000	•	High-pressure pump mounted (* The HRS050 cannot be selected.) Stainless steel panel specification SI unit only	Particle filter set Dustproof filter Separately-installed power transformer Filter for circulating fluid fill port	くて METus (UL規格)

Self-diagnosis function and check display

Display of 31 types of alarm codes For details, refer to page 15.

Operation is monitored at all times by the integrated sensor. Should any error occur, the self-diagnosis result is displayed by the applicable alarm code (31 types). This makes it easier to identify the cause of the alarm. Can be used before requesting service

Changeable alarm set values							
Setting item	Set value						
Circulating fluid discharge temperature rise	5 to 48°C						
Circulating fluid discharge temperature drop	1 to 39°C						
Circulating fluid discharge pressure rise	0.05 to 0.75 MPa*1						
Circulating fluid discharge pressure drop	0.05 to 0.18 MPa*1						
*1 Set values vary depending on the model.							

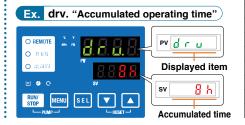

Alarm codes can be used for the notification of upcoming recommended maintenance. The codes notify you when it's time to check the pump and fan motor. Helpful for facility maintenance

Check display

The internal temperature, pressure, and operating time of the product are displayed.

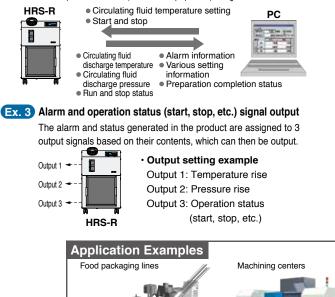

Displayed item Circulating fluid outlet temperature Circulating fluid return temperature Compressor gas temperature Circulating fluid outlet pressure Compressor gas discharge pressure Compressor gas return pressure Accumulated operating time Accumulated operating time of pump Accumulated operating time of fan motor Accumulated operating time of compressor

Communication function

Serial communication (RS232C/RS485) and contact I/Os (2 inputs and 3 outputs) are equipped as standard. This allows for communication with the user's equipment and system construction, depending on the application. A 24 VDC output can be also provided and is available for use with flow switches (SMC's PF3W, etc.).

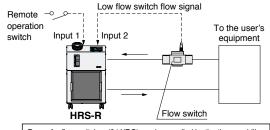

Ex. 1 Remote signal I/O through serial communication

Remote operation is enabled (to start and stop operation) through serial communication.

Ex. 2 Remote operation signal input

One of the contact inputs is used for remote operation and the other is used to monitor the flow of a flow switch. This is where their alarm outputs are taken in.

Power for flow switches (24 VDC) can be supplied by the thermo-chiller.

SMC

Circulating Fluid Temperature Controller **Thermo-chiller** Environmentally Resistant Type HRS-R Series

Global Supply Network

SMC has a comprehensive network in the global market.

We now have a presence of more than 500 branch offices and distributors in 83 countries and regions worldwide, such as Asia, Oceania, North/Central/South America, and Europe. With this global network, we are able to provide a global supply of our substantial range of products and high-quality customer service. We also provide full support to local factories, foreign manufacturing companies, and Japanese companies in each country.

SMC Thermo-chiller Variations

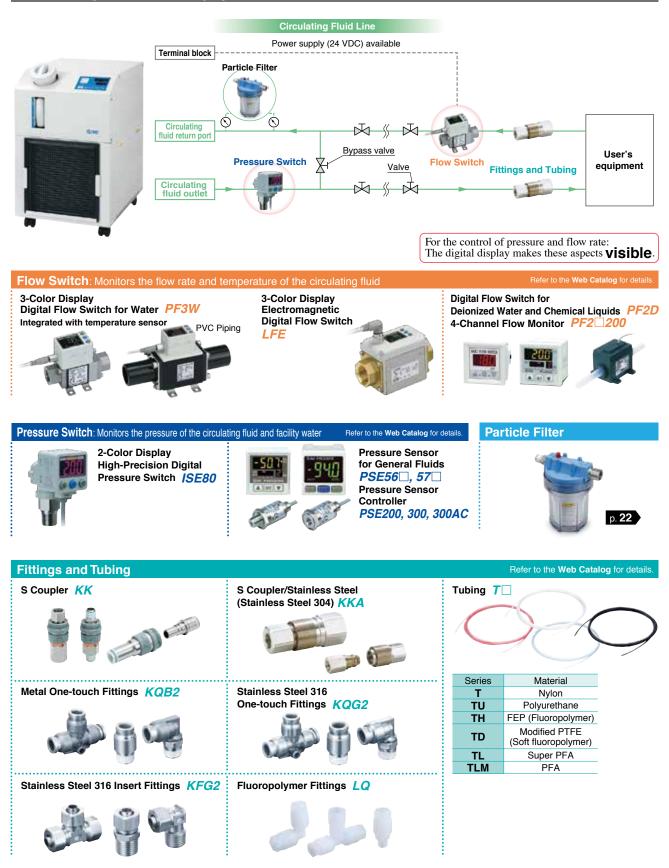

Lots of variations are available according to the users' requirements.

*1 No condensation should be present. *2 If tap water is used, use water that is compliant with the Water Quality Standards of the Japan Refrigeration and Air Conditioning Industry Association (JRA GL-02-1994 cooling

water system - circulating type - make-up water). *3 ① Ambient temperature: 25°C, ② Circulating fluid temperature: 20°C, ③ Circulating fluid at the rated flow, ④ Circulating fluid: Tap water

Refer to the cooling capacity graph on page 10 for details. *4 Use a 15% ethylene glycol aqueous solution if operating in a place where the circulating

fluid temperature is 10°C or less. *5 Temperature at the thermo-chiller outlet when the circulating fluid flow is at the rated flow

 $*6\,$ The capacity at the thermo-chiller outlet when the circulating fluid temperature is 20 $^\circ\text{C}$ *7 The required minimum flow rate for maintaining the cooling capacity or temperature stability The specification of the cooling capacity and the temperature stability may not be satisfied if the flow rate is lower than the rated flow. (In such a case, use a bypass piping set (sold separately).)

The installation environment and power supply are within the specification range and stable.

*8 Purchase an earth leakage breaker with a sensitivity current of 30 mA separately. (A product with an optional earth leakage breaker (option B) is also available.)

*9 Front: 1 m, height: 1 m, stable with no load, Other conditions \rightarrow See *3.

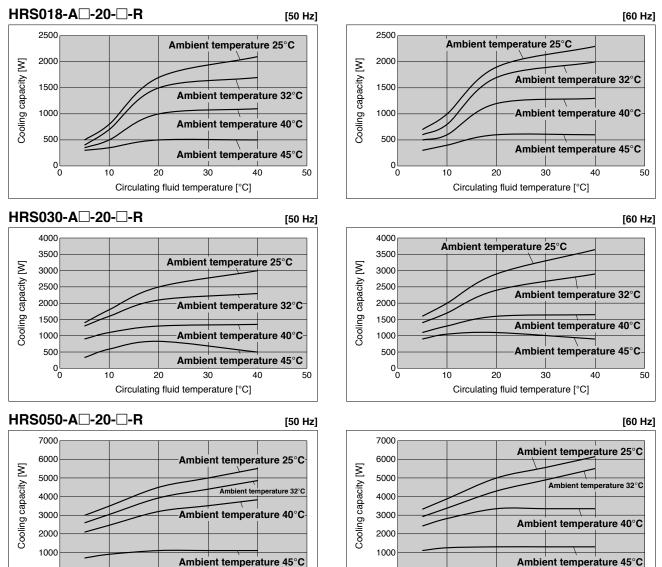

and the circulating fluid outlet and return port are directly connected

HRS-PF003, as a preventive measure.

 $\ast 10~$ Weight in the dry state without circulating fluids

If the product is used at an altitude of 1000 m or higher, refer to "Operating Environment/Storage Environment" (page 27) Item 14 "For altitudes of 1000 m or higher."

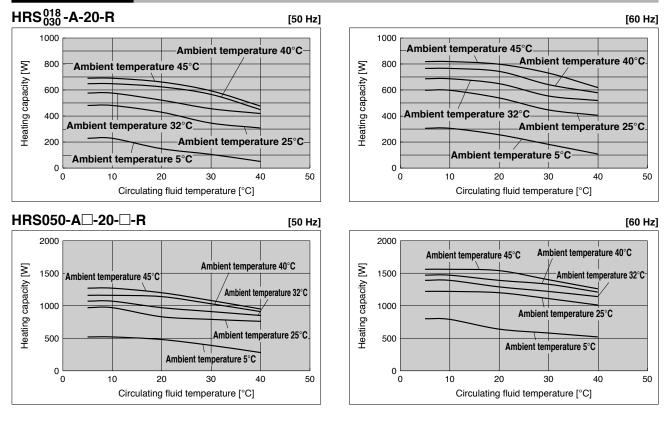

Cooling Capacity * For models with a high-pressure pump mounted (-T), the cooling capacity will decrease by about 300 W from each graph.

Operation Display Panel

The basic operation of this unit is controlled through the operation display panel on the front of the product.

No.	Description	Function						
	Digital display	PV	PV Displays the circulating fluid current discharge temperature and pressure and alarm codes and other menu items (codes).					
	(7-segment, 4 digits)	SV	SV Displays the circulating fluid discharge temperature and the set values of other menus.					
2	[°C] [°F] lamp	Equipped with a unit conversion function. Displays the unit of display temperature (default setting: °C).						
3	[MPa] [PSI] lamp	Equipp	Equipped with a unit conversion function. Displays the unit of display pressure (default setting: MPa).					
4	[REMOTE] lamp	Enable	es remote operation (start and stop) by communication. Lights up during remote operation.					
5	[RUN] lamp		Lights up when the product is started, and goes off when it is stopped. Flashes during stand-by for stop or anti-freezing function, or independent operation of the pump.					
6	[ALARM] lamp	Flashe	s with buzzer when alarm occurs.					
\bigcirc	[🖃] lamp	Lights	Lights up when the surface of the fluid level indicator falls below the L level.					
8	[🕘] lamp	Equipp	Equipped with a timer for start and stop. Lights up when this function is operated.					
9	[C] lamp		Equipped with a power failure auto-restart function, which restarts the product automatically after stopped due to a power failure, is provided. Lights up when this function is operated.					
10	[RUN/STOP] key	Makes	Makes the product start or stop.					
1	[MENU] key		Shifts the main menu (display screen of circulating fluid discharge temperature and pressure) and other menus (for monitoring and entry of set values).					
12	[SEL] key	Chang	Changes the item in menu and enters the set value.					
13	[▼] key	Decrea	Decreases the set value.					
(14)	[▲] key	Increa	Increases the set value.					
15	[PUMP] key	Press the	[MENU] and [RUN/STOP] keys simultaneously. The pump starts running independently to make the product ready for start-up (release the air).					
16	[RESET] key	Press	Press the [▼] and [▲] keys simultaneously. The alarm buzzer is stopped and the [ALARM] indicator is reset.					

Alarm

This unit has 31 types of alarms as standard, and displays each of them by its alarm code on the PV screen with the [ALARM] lamp ([LOW LEVEL] lamp) lit up on the operation display panel. The alarm can be read out through communication.

Alarm code	Alarm message	Operation status	A	larm code	Alarm message	Operation status
AL01	Low level in tank	Stop*1		AL18	Compressor overload	Stop
AL02	High circulating fluid discharge temperature	Stop		AL19* ²	Communication error*2	Continue*1
AL03	Circulating fluid discharge temperature rise	Continue*1		AL20	Memory error	Stop
AL04	Circulating fluid discharge temperature drop	Continue*1		AL21	DC line fuse cut	Stop
AL05	High circulating fluid return temperature (60°C)	Stop		AL22	Circulating fluid discharge temperature sensor failure	Stop
AL06	High circulating fluid discharge pressure	Stop		AL23	Circulating fluid return temperature sensor failure	Stop
AL07	Abnormal pump operation	Stop		AL24	Compressor intake temperature sensor failure	Stop
AL08	Circulating fluid discharge pressure rise	Continue*1		AL25	Circulating fluid discharge pressure sensor failure	Stop
AL09	Circulating fluid discharge pressure drop	Continue*1		AL26	Compressor discharge pressure sensor failure	Stop
AL10	High compressor intake temperature	Stop		AL27	Compressor intake pressure sensor failure	Stop
AL11	Low compressor intake temperature	Stop		AL28	Pump maintenance	Continue
AL12	Low super heat temperature	Stop		AL29	Fan motor maintenance	Continue
AL13	High compressor discharge pressure	Stop		AL30	Compressor maintenance	Continue
AL15	Refrigerating circuit pressure (high pressure side) drop	Stop		AL31*2	Contact 1 input signal detection	Stop*1
AL16	Refrigerating circuit pressure (low pressure side) rise	Stop		AL32* ²	Contact 2 inputs signal detection	Stop*1
AL17	Refrigerating circuit pressure (low pressure side) drop	Stop				

*1 "Stop" or "Continue" are default settings. Users can change them to "Continue" and "Stop". For details, refer to the Operation Manual. *2 "AL19, AL31, AL32" are disabled in the default setting. If this function is necessary, it should be set by the user, referring to the Operation Manual.

2 "AL19, AL31, AL32" are disabled in the default setting. If this function is necessary, it should be set by the user, referring to the Operation Manu

Please download the Operation Manual via our website, https://www.smcworld.com

HRS-R Series Options

B Option symbol

With Earth Leakage Breaker

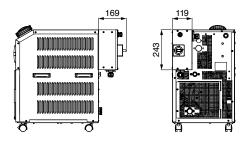

HRS A-20-B-R

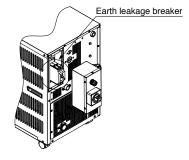

With earth leakage breaker

In the event of a short circuit, overcurrent or overheating, the earth leakage breaker will automatically shut off the power supply.

Model	Rated current [A]	Sensitivity of leak current [mA]
HRS018-A□-20-B□-R HRS030-A□-20-B□-R	10	30
HRS0	15	30
HRS050-A□-B□-R	20	30

* When the type with an earth leakage breaker is selected, the weight increases by 2 kg.

* Options have to be selected when

It is not possible to add them after

ordering the thermo-con.

purchasing the unit.

Option symbol

With Automatic Fluid Fill Function

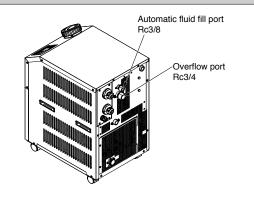

HRS A-20-J-R

• With automatic fluid fill function

By installing this at the automatic fluid fill port, the circulating fluid can be automatically supplied to the product using a built-in solenoid valve for a fluid fill while the circulating fluid is decreasing.

Applicable model	HRS018/030/050-A-20-J-R	
Fluid fill method	Built-in solenoid valve for automatic fluid fill	
Fluid fill pressure [MPa]	0.2 to 0.5	

* When the option, with automatic fluid fill function, is selected, the weight increases by 1 kg.

Option symbol

Large Capacity Tank Specification

Large capacity tank specification

Tank capacity: 12 L

No change in external dimensions

* When the large capacity tank specification is selected, the weight increases by 1 kg.

HRS-R Series Options

Option symbol

High-Pressure Pump Mounted

HRS A-20-T-R

High-pressure pump mounted

Possible to choose a high-pressure pump in accordance with user's piping resistance. Cooling capacity will decrease by heat generated in the pump.

Applicable model			HRS018/030-A□-20-□T-R	
Rated flow (50/60 Hz)*1,*2 L/min		L/min	10 (0.35 MPa)/14 (0.35 MPa)	
Bump	Maximum flow rate (50/60 Hz)	L/min	17/20	
Fump	Pump Maximum pump head (50/60 Hz)		70	
Output	Output	W	610	
Recommende	Recommended earth leakage breaker capacity		15	
Cooling capacity*3		W The cooling capacity reduces about 300 W from the value in the cata (due to an increase in the heat generation of the pump)		

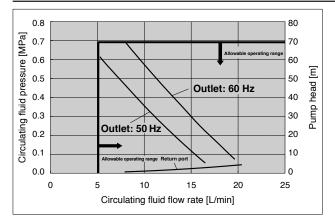

*1 The capacity at the thermo-chiller outlet when the circulating fluid temperature is 20°C.

*2 Required minimum flow rate for maintaining the cooling capacity or temperature stability

*3 Cooling capacity will decrease as pump power increases.
*4 When the option, high-pressure pump mounted, is selected, the weight

increases by 7 kg. * No change in external dimensions

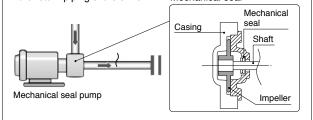

Pump Capacity

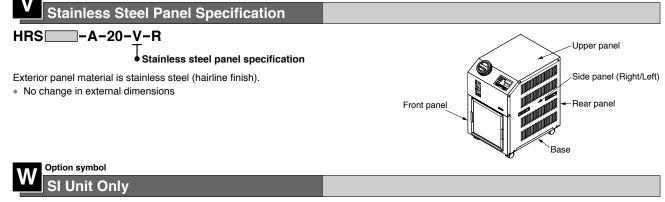

ACaution

Mechanical Seal Pump

The pump used for the option T of the thermo-chiller HRS018/030-R uses a mechanical seal with the fixed ring and rotary ring used for the shaft seal part. If foreign matter enter the gap between the seals, this may cause a trouble such as leakage from the seal part or pump lock. Therefore, it is strongly recommended to install the particle filter in the return piping of the chiller. Mechanical seal

HRS A-20-W-R

Option symbol

SI unit only

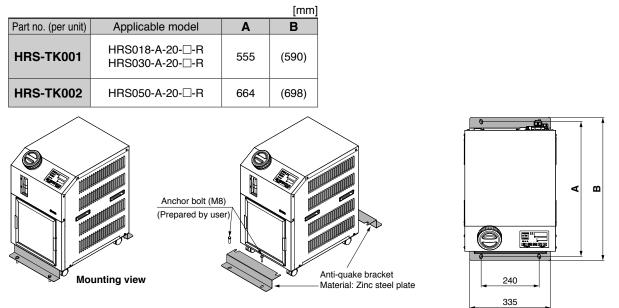

The circulating fluid temperature and pressure are displayed in SI units $\ensuremath{[MPa/^{\circ}C]}$ only.

If this option is not selected, a product with a unit selection function will be provided by default.

* No change in external dimensions

1 Anti-Quake Bracket

This bracket can be used to reduce product damage in the case of an earthquake. An anchor bolt (M8) suitable for the flooring material should be prepared separately by the user. (Anti-quake bracket thickness: 1.6 mm)

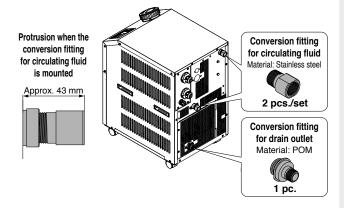

2 Piping Conversion Fitting

■ Conversion fitting for circulating fluid + Conversion fitting for drain outlet HRS018-A-20-□-R, HRS030-A-20-□-R

This fitting changes the port size for circulating fluid from Rc1/2 to G1/2 or NPT1/2, and for drain from Rc3/8 to G3/8 or NPT3/8. It is not necessary to purchase this when pipe thread type F or N is selected in "How to Order" since it is included in the product.

	Part no.	Applicable model
HRS-EP001	G thread conversion fitting set	HRS018-A-20-□-R
HRS-EP002	NPT thread conversion fitting set	HRS030-A-20-□-R

When the options, with automatic fluid fill function "-J", or high-pressure pump mounted "-T" are selected, purchase ③ piping conversion fitting (for option), too.

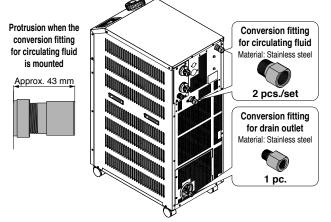

HRS050-A-20-□-R

This fitting changes the port size for circulating fluid from Rc1/2 to G1/2 or NPT1/2, and for drain from Rc1/4 to G1/4 or NPT1/4. It is not necessary to purchase this when pipe thread type F or N is selected in "How to Order" since it is included in the product.

	Part no.	Applicable model
HRS-EP009	G thread conversion fitting set	
HRS-EP010	NPT thread conversion fitting set	HRS050-A-20-□-R

When the option, with automatic fluid fill function "-J", is selected, purchase ③ piping conversion fitting (for option), too.

③ Piping Conversion Fitting (For Option)

Conversion fitting for automatic fluid fill port

This fitting changes the port size for the option, with automatic fluid fill function "-J" from Rc3/8, Rc3/4 to G3/8, G3/4 or NPT3/8, NPT3/4.

It is not necessary to purchase this when pipe thread type F or N is selected in "How to Order" since it is included in the product.

	Applicable model	
HRS-EP005	G thread conversion fitting set	HRS018-A-20-J-R HRS030-A-20-J-R
HRS-EP006	NPT thread conversion fitting set	HRS030-A-20-J-R HRS050-A-20-J-R

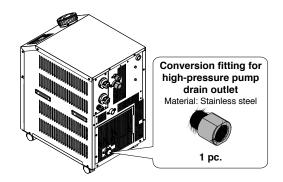

Conversion fitting for drain outlet

This fitting changes the port size for drain outlet for the option, high-pressure pump mounted "-T" from Rc1/4 to G1/4 or NPT1/4. It is not necessary to purchase this when pipe thread type F or N is selected in "How to Order" since it is included in the product.

	Applicable model	
HRS-EP007	G thread conversion fitting	HRS018-A-20-T-R
HRS-EP008	NPT thread conversion fitting	HRS030-A-20-T-R HRS050-A-20-R* ¹

*1 It is not necessary to purchase this when you purchase the HRS-EP009 to 010 since it is included in the product.

Concentration Meter

This meter can be used to control the concentration of ethylene glycol aqueous solution regularly.

Part no.	Applicable model	Approx. 170 mm
HRZ-BR002	HRS018-A-20-□-R HRS030-A-20-□-R HRS050-A-20-□-R	

Approx. 35 mm

5 Bypass Piping Set

When the circulating fluid goes below the rated flow (7 L/min for the HRS018/030-R and 23/28 L/min for the HRS050-R), cooling capacity will be reduced and the temperature stability will be badly affected. In such a case, use the bypass piping set.

Part no.	Applicable model
	HRS018-A-20-□-R
HRS-BP001	HRS030-A-20-□-R

9 Filter for Circulating Fluid Fill Port

Prevents foreign matter from entering the tank when supplying the circulating fluid. Can be used just by fitting into the circulating fluid fill port.

■ Filter for circulating fluid fill port HRS-PF007

Material	Stainless steel 304, Stainless steel 316
Mesh size	200

HRS-R Series Cool Capacity Calculation

Required Cooling Capacity Calculation

Example 1: When the heat generation amount in the user's equipment is known.

The heat generation amount can be determined based on the power consumption or output of the heat generating area — i.e. the area requiring cooling — within the user's equipment.*1

① Derive the heat generation amount from the power consumption.

Power consumption P: 1000 [W]

Q = P = 1000 [W]

Cooling capacity = Considering a safety factor of 20%, 1000 [W] x 1.2 = 1200 [W]
 uipment.*1
 :: Current
 amount

 V: Power supply voltage
 User's equipment

 Power consumption

② Derive the heat generation amount from the power supply output.

Power supply output VI: 1.0 [kVA]

 $Q = P = V \times I \times Power factor$

In this example, using a power factor of 0.85:

Cooling capacity = Considering a safety factor of 20%,

850 [W] x 1.2 = 1020 [W]

③ Derive the heat generation amount from the output. Output (shaft power, etc.) W: 800 [W]

$$Q = P = \frac{W}{Efficiency}$$

In this example, using an efficiency of 0.7:

Cooling capacity = Considering a safety factor of 20%, 1143 [W] x 1.2 = 1372 [W]

*1 The examples above calculate the heat generation amount based on the power consumption. The actual heat generation amount may differ due to the structure of the user's equipment. Be sure to check it carefully.

Example 2: When the heat generation amount in the user's equipment is not known.

Obtain the temperature difference between inlet and outlet by circulating the circulating fluid inside the user's equipment.

Heat generation amount by user's equipment Q : Unknown [W] ([J/s]) Circulating fluid : Tap water*1 Example of conventional units (Reference) Circulating fluid mass flow rate qm : (= $\rho \times q_v \div 60$) [kg/s] Heat generation amount by user's equipment \mathbf{Q} : Unknown [cal/h] \rightarrow [W] Circulating fluid density p : 1 [kg/dm³] : Tap water*1 Circulating fluid Circulating fluid (volume) flow rate qv : 10 [dm³/min] Circulating fluid weight flow rate qm : (= $\rho \times q_v \times 60$) [kgf/h] Circulating fluid specific heat C : 4.2 x 10³ [J/(kg·K)] Circulating fluid weight volume ratio y : 1 [kgf/L] Circulating fluid outlet temperature T1 : 293 [K] (20 [°C]) Circulating fluid (volume) flow rate qv : 10 [L/min] Circulating fluid return temperature T2 : 295 [K] (22 [°C]) : 1.0 x 10³ [cal/(kgf·°C)] Circulating fluid specific heat C Circulating fluid temperature difference ΔT : 2.0 [K] (= T₂ - T₁) : 20 [°C] Circulating fluid outlet temperature T1 Conversion factor: minutes to seconds (SI units): 60 [s/min] Circulating fluid return temperature T2 : 22 [°C] *1 Refer to page 25 for the typical physical property value of tap water or other Circulating fluid temperature difference ΔT : 2.0 [°C] (= T₂ - T₁) circulating fluids. Conversion factor: hours to minutes : 60 [min/h] $\mathbf{Q} = \mathbf{qm} \mathbf{x} \mathbf{C} \mathbf{x} (\mathbf{T}_2 - \mathbf{T}_1)$ Conversion factor: kcal/h to kW : 860 [(cal/h)/W] $= \frac{\rho \times q_{v} \times C \times \Delta T}{1 \times 10 \times 4.2 \times 10^{3} \times 2.0}$ $Q = \frac{q_m \ x \ C \ x \ (T_2 - T_1)}{q_m \ x \ C \ x \ (T_2 - T_1)}$ 860 = 1400 [J/s] ~ 1400 [W] <u>γ x qv x 60 x</u> C x ΔT 860 Cooling capacity = Considering a safety factor of 20%, 1 x 10 x 60 x 1.0 x 10³ x 2.0 1400 [W] x 1.2 = 1680 [W] 860 qv: Circulating Q: Heat T2: Return fluid flow generation 1200000 [cal/h] temperature Thermo-chiller rate amount 860 User's equipment 6 ≈ 1400 [W] $\Delta T = T_2 - T_1$ $\langle \langle \langle$ Cooling capacity = Considering a safety factor of 20%, 1400 [W] x 1.2 = 1680 [W] T1: Outlet temperature

HRS-R Series **Cool Capacity Calculation**

Required Cooling Capacity Calculation

Example 3: When there is no heat generation, and when cooling the object below a certain temperature and period of time.

Heat quantity by cooled substance (per unit time) Q : Unknown [W] ([J/s]) Cooled substance : Water Cooled substance mass m : $(= \rho \times V)$ [kg] Cooled substance density ρ : 1 [kg/L] Cooled substance total volume V : 20 [dm ³] Cooled substance specific heat C : 4.2 x 10 ³ [J/(kg·K)] Cooled substance temperature when cooling begins To : 305 [K] (32 [°C]) Cooled substance temperature after t hour Tt : 293 [K] (20 [°C]) Cooling temperature difference ΔT : 12 [K] (= To – Tt) Cooling time Δt : 900 [s] (= 15 [min]) * Refer to the following for the typical physical property values by circulating fluid. $\mathbf{Q} = \frac{\mathbf{m} \times \mathbf{C} \times (\mathbf{T0} - \mathbf{Tt})}{\Delta t} = \frac{\rho \times V \times \mathbf{C} \times \Delta T}{\Delta t}$ $= \frac{1 \times 20 \times 4.2 \times 10^3 \times 12}{900} = 1120 [J/s] \approx 1120 [W]$	Example of conventional units (Reference)Heat quantity by cooled substance (per unit time) Q: Unknown [cal/h] \rightarrow [W]Cooled substance weight m: (= $\rho \times V$) [kgf]Cooled substance weight volume ratio γ :1 [kgf/L]Cooled substance total volume V:20 [L]Cooled substance specific heat C: 1.0 x 10 ³ [cal/(kgf.°C)]Cooled substance temperature whencooling begins To:32 [°C]Cooled substance temperature after t hour Tt : 20 [°C]Cooling temperature difference ΔT :12 [°C] (= To - Tt)Cooling temperature difference ΔT :15 [min]Conversion factor: hours to minutes:60 [min/h]Conversion factor: hours to minutes:60 [cal/h)/W]Q = $\frac{m \times C \times (To - Tt)}{\Delta t \times 860} = \frac{\gamma \times V \times 60 \times C \times \Delta T}{\Delta t \times 860}$
Cooling capacity = Considering a safety factor of 20%,	$\Delta t \mathbf{x} 860 \qquad \Delta t \mathbf{x} 860$
1120 [W] x 1.2 = 1344 [W] Thermo-chiller $Q x \Delta t$: Heat capacity [kJ] $Q x \Delta t$: Heat capacity [kJ] $Q x \Delta t$: Heat capacity [kJ] $Q x \Delta t$: Heat capacity [kJ] After 15 minutes, cool 32°C down to 20°C. * This is the calculated value by changing the fluid	= $\frac{1 \times 20 \times 60 \times 1.0 \times 10^3 \times 12}{15 \times 860}$ ≈ 1120 [W] Cooling capacity = Considering a safety factor of 20%, 1120 [W] x 1.2 = 1344 [W] temperature only.

Thus, it varies substantially depending on the water bath or piping shape.

Precautions on Cooling Capacity Calculation

1. Heating capacity

When the circulating fluid temperature is set above room temperature, it needs to be heated by the thermo-chiller. The heating capacity depends on the circulating fluid temperature. Consider the radiation rate and heat capacity of the user's equipment and check beforehand if the required heating capacity is provided.

2. Pump capacity

<Circulating fluid flow rate>

Circulating fluid flow rate varies depending on the circulating fluid discharge pressure. Consider the installation height difference between the thermo-chiller and the user's equipment, and the piping resistance such as circulating fluid pipings, or piping size, or piping curves in the machine. Check beforehand if the required flow is achieved, using the pump capacity curves.

<Circulating fluid discharge pressure>

Circulating fluid discharge pressure has the possibility to increase up to the maximum pressure in the pump capacity curves. Check beforehand if the circulating fluid pipings or circulating fluid circuit of the user's equipment are fully durable against this pressure.

Circulating Fluid Typical Physical Property Values

1. This catalog uses the following values for density and specific heat in calculating the required cooling capacity.

 ρ : 1 [kg/L] (or, using conventional units, weight volume ratio γ = 1 [kgf/L]) C: 4.19 x 10^s [J/(kg·K)] (or, using conventional units, 1 x 10^s [cal/(kgf·°C)]) Density

Specific heat

2. Values for density and specific heat change slightly according to temperature shown below. Use this as a reference. 15% Ethvlene Glycol Aqueous Solution Water

Physical property value	Density p	P Specific heat C Conventional units		onal units
Temperature	[kg/L]	[J/(kg·K)]	Weight volume ratio γ [kgf/L]	Specific heat C [cal/(kgf·°C)]
5°C	1.00	4.2 x 10 ³	1.00	1 x 10 ³
10°C	1.00	4.19 x 10 ³	1.00	1 x 10 ³
15°C	1.00	4.19 x 10 ³	1.00	1 x 10 ³
20°C	1.00	4.18 x 10 ³	1.00	1 x 10 ³
25°C	1.00	4.18 x 10 ³	1.00	1 x 10 ³
30°C	1.00	4.18 x 10 ³	1.00	1 x 10 ³
35°C	0.99	4.18 x 10 ³	0.99	1 x 10 ³
40°C	0.99	4.18 x 10 ³	0.99	1 x 10 ³

Physical property value	Density ρ Specific heat C Conventional units			onal units
Temperature	[kg/L]	[J/(kg·K)]		Specific heat C [cal/(kgf·°C)]
5°C	1.02	3.91 x 10 ³	1.02	0.93 x 10 ³
10°C	1.02	3.91 x 10 ³	1.02	0.93 x 10 ³
15°C	1.02	3.91 x 10 ³	1.02	0.93 x 10 ³
20°C	1.01	3.91 x 10 ³	1.01	0.93 x 10 ³
25°C	1.01	3.91 x 10 ³	1.01	0.93 x 10 ³
30°C	1.01	3.91 x 10 ³	1.01	0.94 x 10 ³
35°C	1.01	3.91 x 10 ³	1.01	0.94 x 10 ³
40°C	1.01	3.92 x 10 ³	1.01	0.94 x 10 ³

* Shown above are reference values. Contact circulating fluid supplier for details.

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For temperature control equipment precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on SMC website: https://www.smcworld.com

Design

\land Warning

- 1. This catalog shows the specifications of a single unit.
 - Check the specifications of the single unit (contents of this catalog) and thoroughly consider the adaptability between the user's system and this unit.
 - 2) Although a protection circuit as a single unit is installed, prepare a drain pan, water leakage sensor, discharge air facility, and emergency stop equipment, depending on the user's operating conditions. Also, the user is requested to carry out a safety design for the whole system.
- 2. When attempting to cool areas that are open to the atmosphere (tanks, pipes), plan your piping system accordingly.

When cooling open-air external tanks, arrange the piping so that there are coil pipes for cooling inside the tanks and to carry back the entire flow volume of circulating fluid that is released.

3. Use non-corrosive material for circulating fluid contact parts.

The recommended circulating fluid is tap water or 15% ethylene glycol aqueous solution. Using corrosive materials such as aluminum or iron for fluid contact parts such as piping may cause clogging or leakage in the circulating fluid circuit. Therefore, take sufficient care when selecting fluid contact part materials such as piping.

4. Design the piping so that no foreign matter enters the chiller.

If foreign matter, such as scales in the piping, enters the circulating fluid, this may cause the pump to malfunction.

Selection

\land Warning

1. Model selection

When selecting a thermo-chiller model, the amount of heat generation from the user's equipment must be known. Obtain this value, referring to "Cooling Capacity Calculation" on pages 24 and 25 before selecting a model.

Handling

\land Warning

1. Thoroughly read the operation manual.

Read the operation manual completely before operation, and keep the manual where it can be referred to as necessary.

Transportation/Carriage/Movement

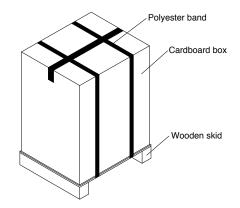

\land Warning

- 1. This product is heavy. Pay attention to safety and the position of the product when it is transported, carried, and moved.
- 2. Read the operation manual carefully before moving the product after unpacking.

\land Caution

1. Never put the product down on its side as this may cause failure.

The product will be delivered in the packaging shown below.

Model	Weight [kg]*1	Dimensions [mm]
HRS018-A-20-⊟-R HRS030-A-20-⊟-R	54	Height 790 x Width 470 x Depth 580
When option B or T is included in the model above (HRS018/030)	See *1 below.	Height 790 x Width 470 x Depth 780
HRS050-A-20-□-R	80	Height 1160 x Width 450 x Depth 670
When option B is included in the model above (HRS050)	See *1 below.	Height 1200 x Width 515 x Depth 995

*1 For models with an option, the weight increases as shown below.

Option	Description	Additional weight		
symbol	Description	HRS018/030	HRS050	
-B	With earth leakage breaker	+6 kg	+7 kg	
-J	With automatic fluid fill function	+1 kg		
-L	Large capacity tank specification	+1 kg		
-Т	High-pressure pump mounted	+11 kg	-	
-V	Stainless steel panel specification	No additional weight		
-W	SI unit only	No additional weight		

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For temperature control equipment precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on SMC website: https://www.smcworld.com

Operating Environment/Storage Environment

M Warning

- 1. Do not use in the following environment as it will lead to a breakdown.
 - 1) Outdoors
 - In locations where water, water vapor, salt water, and oil may splash on the product
 - In locations where there is a large amount of dust and particles
 - 4) In locations where corrosive gases, organic solvents, chemical fluids, or flammable gases are present (This product is not explosion proof.)
 - 5) In locations where the ambient temperature exceeds the limits as mentioned below
 - During transportation/storage: 0 to 50°C (But as long as water or circulating fluid are not left inside the pipings) During operation: 5 to 45°C
 - 6) In locations where the ambient humidity is out of the following range or where condensation occurs

During transportation/storage: 15 to 85% During operation: 30 to 70%

- 7) In locations which receive direct sunlight or radiated heat
- 8) In locations where there is a heat source nearby and the ventilation is poor
- 9) In locations where temperature substantially changes
- 10) In locations where strong magnetic noise occurs (In locations where strong electric fields, strong magnetic fields, and surge voltage occur)
- 11) In locations where static electricity occurs, or conditions which make the product discharge static electricity
- 12) In locations where high frequency occurs
- 13) In locations where damage is likely to occur due to lightning
- 14) In locations at an altitude of 3000 m or higher (Except during storage and transportation)
 - * For altitudes of 1000 m or higher

Because of lower air density, the heat radiation efficiencies of the devices in the product will be lower in the location at an altitude of 1000 m or higher. Therefore, the maximum ambient temperature to use and the cooling capacity will lower according to the descriptions in the table below.

Select the thermo-chiller considering the descriptions.

- Upper limit of ambient temperature: Use the product in ambient temperature of the described value or lower at each altitude.
- ② Cooling capacity coefficient: The product's cooling capacity will lower to one that multiplied by the described value at each altitude.

Altitude [m]	① Upper limit of ambient temperature [°C]	② Cooling capacity coefficient
Less than 1000 m	45	1.00
Less than 1500 m	42	0.85
Less than 2000 m	38	0.80
Less than 2500 m	35	0.75
Less than 3000 m	32	0.70

- 15) In locations where strong impacts or vibrations occur
- 16) In locations where a massive force strong enough to deform the product is applied or the weight from a heavy object is applied
- 17) In locations where there is not sufficient space for maintenance
- 18) Environment in which the product is exposed to particles or water splash that is higher than IP54

Operating Environment/Storage Environment

\land Warning

2. Install in an environment where the unit will not come into direct contact with rain or snow.

These models are for indoor use only. Do not install outdoors where rain or snow may fall on them.

3. Conduct ventilation and cooling to discharge heat.

The heat which is cooled down through air-cooled condenser is discharged.

When using in a room which is shut tightly, ambient temperature will exceed the specification range stipulated in this catalog, which will activate the safety detector and stop the operation. In order to avoid this situation, discharge the heat outside of a room by ventilation or cooling facilities.

4. The product is not designed for clean room usage. It generates particles internally.

Mounting/Installation

\land Warning

- 1. Do not use the product outdoors.
- 2. Do not place heavy objects on top of this product, or step on it.

The external panel can be deformed and danger can result.

ACaution

- 1. Install on a rigid floor which can withstand this product's weight.
- 2. When installing without the casters, use the adjuster feet, etc. to raise the chiller to the following heights or more.

This product cannot be directly installed on the floor as some screws come out from the bottom of the product.

• HRS018/030-R 10 mm

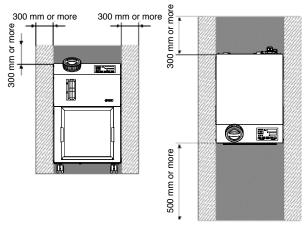

• HRS050-R 15 mm

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For temperature control equipment precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on SMC website: https://www.smcworld.com

Mounting/Installation

A Caution

- 3. Refer to the Operation Manual for this product, and secure an installation space that is necessary for the maintenance and ventilation.
 - The air-cooled type product exhausts heat using the fan that is mounted to the product. If the product is operated with insufficient ventilation, ambient temperature may exceed 45°C, and this will affect the performance and life of the product. To prevent this ensure that suitable ventilation is available (see below).
 - 2. For installation indoors, ventilation ports and a ventilation fan should be equipped as needed.

<Heat radiation amount/Required ventilation rate>

	Heat radiation	Required ventilation rate [m ³ /min]			
Model	amount	Differential temp. of 3°C between inside	Differential temp. of 6°C between inside		
	[kW]	and outside of installation area	and outside of installation area		
HRS018-R	Approx. 4	70	40		
HRS030-R	Approx. 6	100	60		
HRS050-R	Approx.10	140	70		

Piping

▲ Caution

1. Regarding the circulating fluid pipings, consider carefully the suitability for shutoff pressure, temperature and circulating fluid.

If the operating performance is not sufficient, the pipings may burst during operation. Also, the use of corrosive materials such as aluminum or iron for fluid contact parts, such as piping, may not only lead to clogging or leakage in the circulating fluid circuit but also refrigerant leakage and other unexpected problems. Provide protection against corrosion when you use the product.

2. Select the piping port size which can exceed the rated flow.

For the rated flow, refer to the pump capacity table.

- 3. When tightening at the circulating fluid inlet and outlet, drain port or overflow port of this product, use a pipe wrench to clamp the connection ports.
- 4. For the circulating fluid piping connection, install a drain pan and wastewater collection pit just in case the circulating fluid may leak.
- 5. This product series is constant-temperature fluid circulating machines with built-in tanks.

Do not install equipment on your system side such as pumps that forcibly return the circulating fluid to the unit. Also, if you attach an external tank that is open to the air, it may become impossible to circulate the circulating fluid. Proceed with caution.

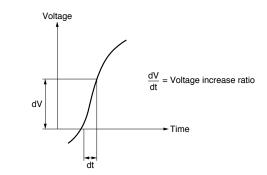

Electrical Wiring

\land Warning

1. Grounding should never be connected to a water line, gas line or lightning rod.

ACaution

- 1. Communication cable should be prepared by the user.
- 2. Provide a stable power supply which is not affected by surge or distortion.
 - If the voltage increase ratio (dV/dt) at the zero cross should exceed 40 V/200 $\mu sec.,$ it may result in malfunction.

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For temperature control equipment precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on SMC website: https://www.smcworld.com

Circulating Fluid

A Caution

- 1. Avoid oil or other foreign matter entering the circulating fluid.
- 2. When water is used as a circulating fluid, use tap water that conforms to the appropriate water quality standards.

Use tap water that conforms to the standards shown below (including water used for dilution of ethylene glycol aqueous solution).

Tap Water (as a Circulating Fluid) Quality Standards

The Japan Refrigeration and Air Conditioning Industry Association

JRA GL-02-1994 Cooling water system – Circulation type – Make-up water					
				Influence	
	Item	Unit Standard value		Corrosion	Scale generation
	pH (at 25°C)	_	6.0 to 8.0	0	0
3	Electric conductivity (25°C)	[µS/cm]	100*1 to 300*1	0	0
item	Chloride ion (CI⁻)	[mg/L]	50 or less	0	
2	Sulfuric acid ion (SO42-)	[mg/L]	50 or less	0	
Standard	Acid consumption amount (at pH4.8)	[mg/L]	50 or less		0
tan	Total hardness	[mg/L]	70 or less		0
ျပ	Calcium hardness (CaCO ₃)	[mg/L]	50 or less		0
	Ionic state silica (SiO ₂)	[mg/L]	30 or less		0
item	Iron (Fe)	[mg/L]	0.3 or less	0	0
	Copper (Cu)	[mg/L]	0.1 or less	0	
ee l	Sulfide ion (S2 ⁻)	[mg/L]	Should not be detected	0	
Lei	Ammonium ion (NH ₄ ⁺)	[mg/L]	0.1 or less	0	
Reference	Residual chlorine (Cl)	[mg/L]	0.3 or less	0	
۳ ا	Free carbon (CO ₂)	[mg/L]	4.0 or less	Ó	

*1 In the case of [M Ω ·cm], it will be 0.003 to 0.01.

• O: Factors that have an effect on corrosion or scale generation

• Even if the water quality standards are met, complete prevention of corrosion is not guaranteed.

3. Use an ethylene glycol aqueous solution that does not contain additives such as preservatives.

4. When using ethylene glycol aqueous solution, maintain a maximum concentration of 15%.

Overly high concentrations can cause a pump overload. Low concentrations, however, can lead to freezing when circulating fluid temperature is 10°C or lower and cause the thermo-chiller to break down.

5. A magnet pump or mechanical seal pump is used as the circulating pump for the circulating fluid.

It is particularly impossible to use liquid including metallic powders such as iron powder.

Operation

A Warning

1. Confirmation before operation

1) The fluid level of a tank should be within the specified range of "HIGH" and "LOW."

When exceeding the specified level, the circulating fluid will overflow.

2) Remove the air.

Conduct a trial operation, looking at the fluid level.

Since the fluid level will go down when the air is removed from the user's piping system, supply water once again when the fluid level is reduced. When there is no reduction in the fluid level, the job of removing the air is completed. Pump can be operated independently.

2. Confirmation during operation

· Check the circulating fluid temperature.

The operating temperature range of the circulating fluid is between 5 and 40°C.

When the amount of heat generated from the user's equipment is greater than the product's capability, the circulating fluid temperature may exceed this range. Use caution regarding this matter.

3. Emergency stop method

• When an abnormality is confirmed, stop the machine immediately. Be sure to shut off the breaker of the user's power supply.

Operation Restart Time/Operation and Suspension Frequency

▲ Caution

- 1. Wait five minutes or more before restarting operation after it has been stopped. If the operation is restarted within five minutes, the protection circuit may activate and the operation may not start properly.
- 2. Operation and suspension frequency should not exceed 10 times per day. Frequently switching between operation and suspension may result in the malfunction of the refrigeration circuit.

Protection Circuit

\land Caution

- 1. If operating in the below conditions, the protection circuit will activate and an operation may not be performed or will stop.
 - \bullet Power supply voltage is not within the rated voltage range of $\pm 10\%.$
 - In case the water level inside the tank is reduced abnormally.
 - Circulating fluid temperature is too high.
 - Compared to the cooling capacity, the heat generation amount of the user's equipment is too high.
 - Ambient temperature is too high. (45°C or more)
 - Refrigerant pressure is too high.
 - Ventilation grille is clogged with dust or dirt.

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For temperature control equipment precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on SMC website: https://www.smcworld.com

Maintenance

A Caution

<Periodical inspection every one month>

1. Clean the ventilation grille.

If the dustproof filter becomes clogged with dust or debris, a decline in cooling performance can result.

In order to avoid deforming or damaging the dustproof filter, clean it with a long-haired brush or air gun.

<Periodical inspection every three months>

- 1. Inspect the circulating fluid.
 - 1) When using tap water
 - Replacement of tap water

Failure to replace the tap water can lead to the development of bacteria and algae. Replace it regularly according to your usage conditions.

Tank cleaning

Consider whether dirt, slime, or foreign matter may be present in the circulating fluid inside the tank, and carry out regular cleanings of the tank.

 When using ethylene glycol aqueous solution Use a concentration meter to confirm that the concentration does not exceed 15%.

Dilute or add as needed to adjust the concentration.

<Periodical inspection during the winter season>

1. Make water-removal arrangements beforehand.

If there is a risk of the circulating fluid freezing when the product is stopped, release the circulating fluid in advance.

2. Consult a professional.

For additional methods to prevent freezing (such as commercially available tape heaters, etc.), consult a professional for advice.

	Global warming potential (GWP)			
Refrigerant	Regulation (EU) No 517/2014 (Based on the IPCC AR4)	Revised Fluorocarbons Recovery and Destruction Law (Japanese law)		
R134a	1,430	1,430		
R404A	3,922	3,920		
R407C	1,774	1,770		
R410A	2,088	2,090		

* This product is hermetically sealed and contains fluorinated greenhouse gases (HFC). When this product is sold on the market in the EU after January 1, 2017, it needs to be compliant with the quota system of the F-Gas Regulation in the EU.

* See specification table for refrigerant used in the product.

▲ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "**Caution**," "**Warning**" or "**Danger**." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)^{*1}, and other safety regulations.

- Caution: Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.
- Warning: Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

Danger : Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

AWarning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

- 3. Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.
 - The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
 - When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
 - Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.
- Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.
 - 1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
 - 2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
 - An application which could have negative effects on people, property, or animals requiring special safety analysis.
 - 4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

- *1) ISO 4414: Pneumatic fluid power General rules relating to systems. ISO 4413: Hydraulic fluid power – General rules relating to systems. IEC 60204-1: Safety of machinery – Electrical equipment of machines. (Part 1: General requirements)
 - ISO 10218-1: Manipulating industrial robots Safety. etc.

▲Caution

 The product is provided for use in manufacturing industries. The product herein described is basically provided for peaceful use in manufacturing industries. If considering using the product in other industries, consult SMC beforehand and undergrading the product in other industries.

and exchange specifications or a contract if necessary. If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".

Read and accept them before using the product.

Limited warranty and Disclaimer

- The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.*²) Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
- 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.
 - *2) Vacuum pads are excluded from this 1 year warranty.

A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

- The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

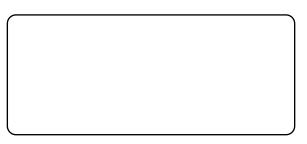

A Safety Instructions Be sure to read the "Handling Precautions for SMC Products" (M-E03-3) and "Operation Manual" before use.
