Mini Rotary Actuator Series CRJ

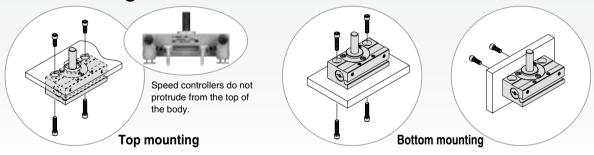

Rack & Pinion Style/Size: 05, 1

Flexible mounting

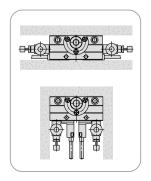

A new compact body design not only reduces overall space requirements, but also achieves space-savings in wiring and piping. Ease in mounting is maximized thanks to the merits of the new compact body.

■ Free mounting

■ Wiring and piping direction can be selected depending on mounting conditions.

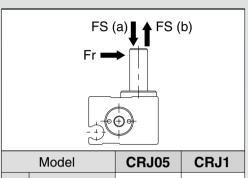

Mounting examples for auto switch and speed controller

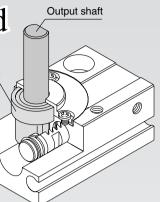

Allowable load improved

Large roller bearing and large diameter output shaft add to overall compactness while ensuring high rigidity. $_{\rm Rolling\ bearing}$

	Model	CRJ05	CRJ1
Allow-	Fr	25	30
able	FS (a)	20	25
(N)	FS (b)	20	25
Outp	ut shaft size (mm)	ø5	ø6

Backlash reduced

Even with a single rack design, the use of a special construction minimizes backlash.

Pinion gear
Piston
Thrust

Stopping the pinion gear by having it strike against the flat surface of the piston eliminates backlash. CRB2

Rotating Direction and Rotating Angle

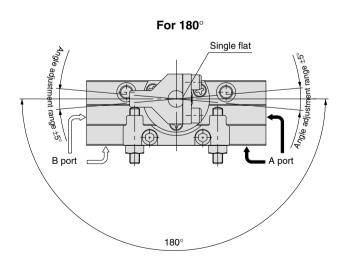

- The shaft turns clockwise when the A port is pressurized, and counterclockwise when the B port is pressurized.
- · For actuators with external stopper, the rotation end can be set within the ranges shown in the drawing by adjusting the stopper bolt.

With external stopper

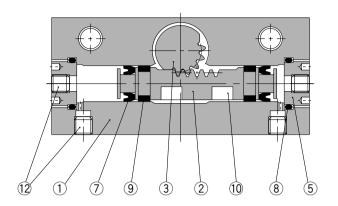

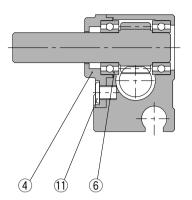

- Note) The drawings show the rotation range for the shaft's single flat.
 The single flat position in the drawings shows the counterclockwise rotation end when the rotation angle is adjusted to 90° and 180°.

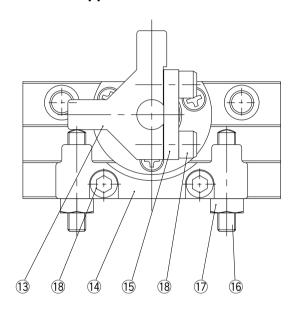

Construction

Basic type: CRJB

With external stopper: CRJU

Component Parts

No.	Description	Material	Note

Series CRJ (Size: 05, 1) **Simple Specials:**

-XA1 to -XA17: Shaft Pattern Sequencing I

Shaft pattern sequencing is dealt with a simple made-to-order system. (Refer to front matter 33.) Please contact SMC for a specification sheet when placing an order.

Shaft Pattern Sequencing I

-XA1 to -XA17

Additional Reminders

- 1. Enter the dimensions within a range that allows for additional machining.
- 2. SMC will make appropriate arrangements if no dimensional, tolerance, or finish instructions are given in the diagram.
- 3. The length of the unthreaded portion is 2 to 3 pitches.
- 4. Unless specified otherwise, the thread pitch is based on coarse metric threads. M3 x 0.5, M4 x 0.7
- 5. Enter the desired figures in the [___] portion of the diagram.
- 6. Chamfer face of the parts machining additionally is C0.5.

The maximum dimension L2 is, as a rule, twice the thread size.

7. The additionally machined port will have an aluminum surface since it is left unfinished.

A special end is machined onto the short shaft, and a through-hole is drilled into it.

Female threads are machined into the through-hole, whose diameter is equivalent to

Series CRJ Specific Product Precautions

Be sure to read before handling.

Refer to front matters 38 and 39 for Safety Instructions and pages 4 to 13 for Rotary Actuator and Auto Switch Precautions.

Rotation Adjustment

⚠ Caution

As a standard feature, the actuator with external stopper is equipped with a rotation angle adjustment screw that can be used to adjust the angle of rotation.

Size	Angle adjustment per single rotation of angle adjustment screw
05	2.3°
1	2.3°

The rotation adjustment range for the actuator with external stopper is $\pm 5^{\circ}$ at each rotation end. Please note that adjusting beyond this range, may cause product malfunction.

Mounting of Speed Controller and Fittings

⚠ Caution

The M3 \times 0.5 piping port is used. In case the speed controller or fittings are directly connected, use the series listed below.

- Speed controller AS12□1F/Elbow type AS13□1F/Universal type
- One-touch fitting One-touch mini Series KJ
- Reducer bushing Series M3

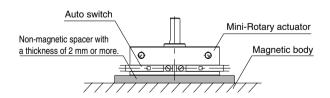

Mounting of Auto Switch

⚠ Caution

If a size 05 actuator with auto switch is being used, keep the magnetic body away at least 2 mm or more from the bottom of the actuator.

If the magnetic body comes closer than 2 mm, malfunction of the auto switch may occur due to the magnetic force drop.

* When using the bottom face for mounting, a non-magnetic spacer (such as aluminum) is required as shown below.

Maintenance

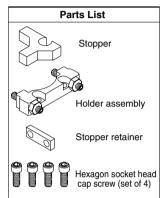

∧ Caution

This product requires special tools; therefore, it cannot be disassembled for maintenance.

External Stopper Unit

∧ Caution

Order external stopper unit with the unit part numbers shown below.

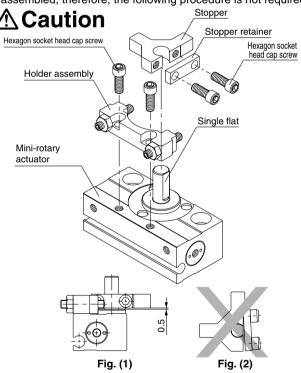

Model	Unit part no.
CRJU05-90	P531010-1
CRJU05-180	P531010-2
CRJU1-90	P531020-1
CRJU1-180	P531020-2

Note 1) External stopper units for 180° cannot be applied to the 90° Mini-rotary Actuators.

Note 2) When using external stoppers for 90°, use Minirotary Actuators with a rotation range of 100°, and for 180°, use actuators with a rotation range of 190°.

External Stopper Assembly Procedure

* Actuators with external stopper (Model CRJU) come already assembled; therefore, the following procedure is not required.

1. Assemble the stopper retainer to the stopper temporarily.

Then place the stopper retainer in the single flat position and tighten with hexagon socket head cap screws. Leave a space of approximately 0.5 mm between the stopper and the Minirotary actuator, as shown in Fig. (1).

Tighten the hexagon socket head cap screws evenly so that the stopper retainer is not unevenly tightened as in Fig. (2). Furthermore, take precautions to avoid applying excessive force to the shaft when tightening.

2. Tighten the holder assembly with hexagon socket head cap screws.

	Tightening torque (N·m)
Hexagon socket head cap screw	0.8 to 1.2
