Vacuum Pad: Ball Joint Type

Series ZPT/ZPR

Pad diameter: ø10, ø13, ø16, ø20, ø25, ø32, ø40, ø50

Pad material: NBR, Silicon rubber, Urethane rubber, Fluororubber, Conductive NBR, Conductive silicon rubber

Series Variations

Adsorption is possible even on a slanted surface.

Inclination 15°
(Rotation 30°)

Buffer stroke

Pad dia. Buffer stroke	ø10	ø13	ø16	ø20	ø25	ø32	ø40	ø50
10 mm	●	●	●	●	●	●	●	●
20 mm	●	●	●	●	●	●	●	●
30 mm	●	●	●	●	●	●	●	●
40 mm	●	●	●	—	—	—	—	—
50 mm	●	●	●	●	●	●	●	●

Pad Material and Characteristics

◎ : Little or no influence ○ : Can be used depending on conditions. X: Not suitable

Characteristics Material	Durometer HS (±5°)	Operating temperature range (°C)	Oil resistance gasoline	Oil resistance benzol	Base resistance	Acid resistance	Weatherability	Ozone resistance	Abrasion resistance	Waterproof	Solvent resistance (Benzene, toluene)
NBR	50°	0 to 120	◎	×	○	○	×	×	◎	○	×
Silicon rubber	40°	-30 to 200	×	×	○	×	◎	◎	×	○	×
Urethane rubber	60°	0 to 60	◎	×	×	×	○	◎	◎	×	×
Fluororubber	60°	0 to 250	◎	◎	×	◎	◎	◎	○	◎	◎
Conductive NBR	50°	0 to 100	○	×	○	×	○	×	○	○	×
Conductive silicon rubber	50°	-10 to 200	×	×	○	×	◎	◎	×	○	×

The above table covers only general characteristics of subject rubber materials.

Pad material used by SMC pass the nominal JIS material standards; however, actual performance depends on operating conditions.

Mounting thread diameter/Male thread
(Refer to "Table (1)" for applications.)

Vacuum entry port
(Refer to "Table (1)" for applications.)

Table (1) Vacuum Entry/Mounting Thread Diameter

Pad dia. (mm)		Mounting thread diameter (Male thread)	
		10 to 16	20 to 50
Connection	Thread dia./Port size	M10 x 1	M14 x 1
Vacuum entry	One-touch fitting		
	ø4 tube	04	—
	ø6 tube	06	●
	ø8 tube	08	●

Tightening torque (N·m)

Mounting thread dia.	Torque
M10 x 1	3.0 ±0.5
M14 x 1	7.0 ±0.5

Buffer stroke

Symbol	Stroke	Pad dia. (mm)	
		ø10 to ø16	ø20 to ø50
10	10 mm	●	●
20	20 mm	●	●
30	30 mm	●	●
40	40 mm	●	—
50	50 mm	●	●

Note) Pads are exclusively ball joint type and are not interchangeable with other pads.

Pad Type

Pad form	Ball joint type					
Pad dia. (mm)	10, 13, 16, 20, 25, 32, 40, 50					
Material	NBR	Silicon rubber	Urethane rubber	Fluoro-rubber	Conductive NBR	Conductive silicon rubber
Color	Black	White	Brown	Black with green mark	Black with 1 silver mark	Black with 2 silver mark
Durometer	50°	40°	60°	60°	50°	50°

Series ZPT/ZPR Specific Product Precautions

Be sure to read before handling.

Refer to front matters 38 and 39 for Safety Instructions and pages 844 to 846 for Vacuum Equipment Precautions.

Caution on Design

⚠ Warning

1. In case where the workpieces are heavy or dangerous objects, etc., take measures to address a possible loss of adsorption force (installation of drop prevention guide, etc.).

In the case of transportation by vacuum adsorption using vacuum pads, adsorption force is lost when there is a drop in vacuum pressure.

Furthermore, since vacuum pressure can also deteriorate due to wear and cracking of pads, and vacuum leakage from piping, etc., be certain to perform maintenance on vacuum equipment.

Selection

⚠ Caution

1. The pad materials which can be used differ depending upon the operating environment.

An appropriate pad material should be selected.

Furthermore, since vacuum pads are manufactured for use with industrial products, they should not come into direct contact with medicines or food products, etc.

2. Depending upon the weight and shape of the workpieces, the diameter, quantity and shape of pads suitable for use will vary.

Use the pad lifting force table for reference.

Also, the pads to be selected will differ based upon conditions other than the above, such as the condition of the workpiece surface (presence or absence of oil or water), the workpiece material and its gas permeability. Confirmation is necessary by actually performing vacuum adsorption on the subject workpieces.

3. Use a buffer for adsorption on fragile workpieces.

The cushioning performed by the buffer is also necessary when there is variation in the height of workpieces. When it is desired to perform further positioning of pads and workpieces, a detent buffer can be used.

4. The life of the buffer will be reduced if lateral force is applied to the buffer shaft.

Note that sometimes a load is applied to the buffer by a piping tube (pulling or pressing, etc. in a lateral direction).

5. Do not apply an impact or large force to a pad when adsorbing a workpiece.

This will cause deformation, cracking and wear of the pad to be accelerated. The stiffening ribs, etc. should touch lightly, while staying within the pad skirt's deformation range. Positioning should be performed accurately. Especially in the case of small diameter pads.

6. When transporting in an upward direction, factors such as acceleration, wind pressure and impact force must be considered in addition to the workpiece weight.

Use caution particularly when lifting items such as glass plates and circuit boards, because a large force will be applied by wind pressure. When a workpiece which is oriented vertically is transported horizontally, large forces are applied by acceleration when movement is started and stopped. Further, in cases where the pad and workpiece can slip easily, accelerations and decelerations of horizontal movement should be kept low.

7. When transporting flat shaped workpieces that have large surface areas using multiple pads, care must be taken in arranging the pads, giving consideration to balance of the workpieces.

8. Use caution since the workpiece could rotate during transfer.

Use of more than one pad for each workpiece is recommended.

Maintenance

⚠ Caution

1. Perform pad maintenance regularly.

Since pads are essentially rubber, deterioration is unavoidable. The rate of deterioration depends upon factors such as conditions of use, environment and temperature. Regular maintenance should be performed. If any damage, splitting, cracking or abrasion has occurred in a pad which appears to be harmful, replace it immediately.

Also, take care not to damage the outside of the pad.

How to Assemble/Disassemble

⚠ Caution

Pad diameter: $\varnothing 10$ to $\varnothing 32$

1. Insert a hexagon wrench from the bottom of the pad, loosen the screw and remove the old pad from the adapter.

2. Place a new pad on the adapter, and after confirming that the O-ring is in place, retighten the screw with the hexagon wrench.

Pad diameter: $\varnothing 40$, $\varnothing 50$

1. Pull the lock ring upward, and after lifting it to the adapter, remove the old pad by pulling it downward.

2. When holding the lock ring in the raised position, place a new pad onto the adapter.

3. Confirm that the pad is securely in place, and then return the lock ring to its original position.
