Step Motor (Servo/24 VDC) Type

◎ Electric Actuator/Guide Rod Slider Series LEL

◎ Step Motor (Servo/24 VDC) Controller

Series LEL Model Selection

Selection Procedure

Step 1 Check the work load – speed.   →   **Step 2** Check the cycle time.   →   **Step 3** Check the allowable moment.

Selection Example

Operating conditions

- Workpiece mass: 8.8 lbs (4 kg)
- Speed: 300 [mm/s]
- Acceleration/Deceleration: 3000 [mm/s²]
- Stroke: 500 [mm]
- Mounting orientation: Horizontal upward

- Workpiece mounting condition:

W
**<Speed–Work load graph>
(LEL25L/Step motor)**

Step 1 **Check the work load–speed. <Speed–Work load graph>** (Pages 2 and 3)

Select the target model based on the workpiece mass and speed with reference to the (Speed–Work load graph).
Selection example) The **LEL25LT-500** is temporarily selected based on the graph shown on the right side.

Step 2 **Check the cycle time.**

Calculate the cycle time using the following calculation method.

Cycle time:

T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \ [s]$$

- T1:
  Acceleration time and T3: Deceleration time can be obtained by the following equation.

  $$T1 = V/a1 \ [s] \qquad T3 = V/a2 \ [s]$$

- T2:
  Constant speed time can be found from the following equation.

  $$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \ [s]$$

- T4:
  Settling time varies depending on the conditions such as motor types, load and in positioning of the step data. Therefore, please calculate the settling time with reference to the following value.

  $$T4 = 0.3 \ [s]$$

Calculation example)
T1 to T4 can be calculated as follows.

$T1 = V/a1 = 300/3000 = 0.1 \ [s]$,
$T3 = V/a2 = 300/3000 = 0.1 \ [s]$

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V}$$

$$= \frac{500 - 0.5 \cdot 300 \cdot (0.1 + 0.1)}{300}$$

$$= 1.57 \ [s]$$

$T4 = 0.3 \ [s]$

Therefore, the cycle time can be obtained as follows.

$T = T1 + T2 + T3 + T4$
$= 0.1 + 1.57 + 0.1 + 0.3$
$= \textbf{2.07 [s]}$
L : Stroke [mm]
    ··· (Operating condition)
V : Speed [mm/s]
    ··· (Operating condition)
a1 : Acceleration [mm/s²]
    ··· (Operating condition)
a2 : Deceleration [mm/s²]
    ··· (Operating condition)
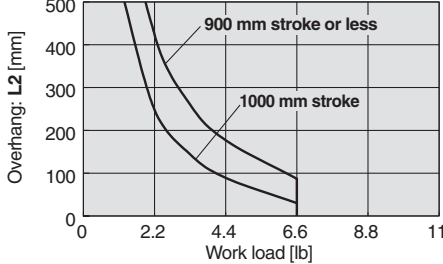

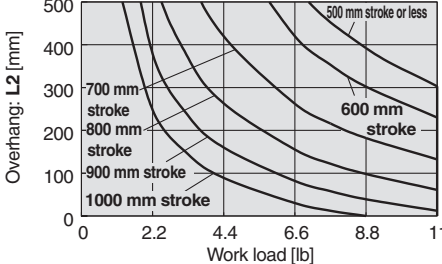

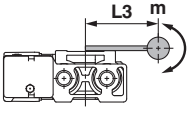

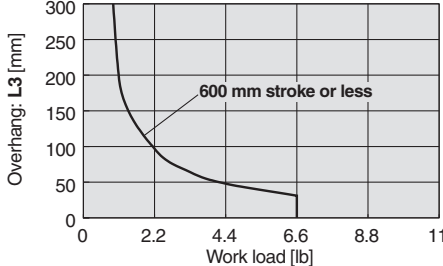

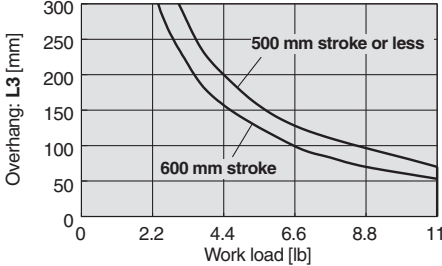

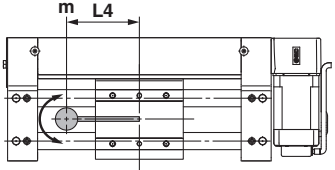

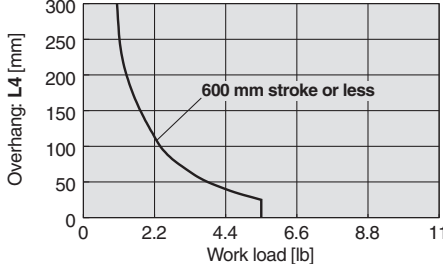

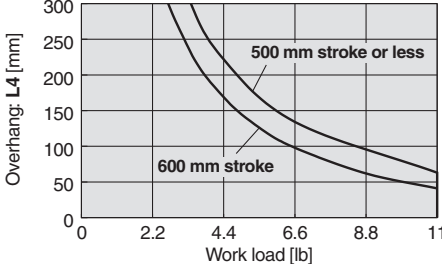

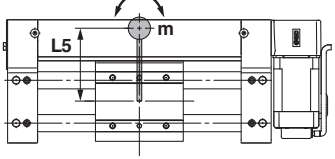

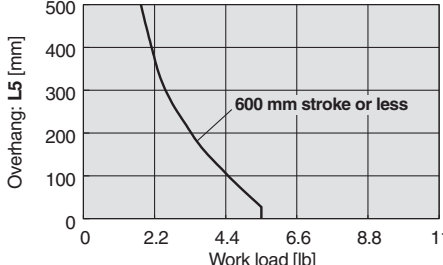

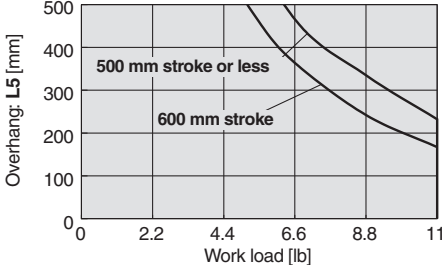

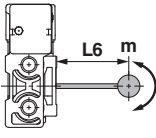

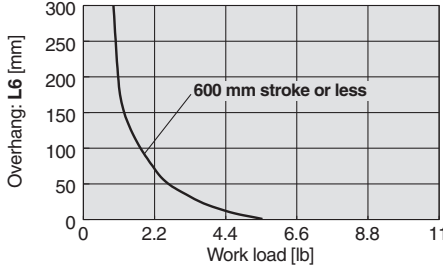

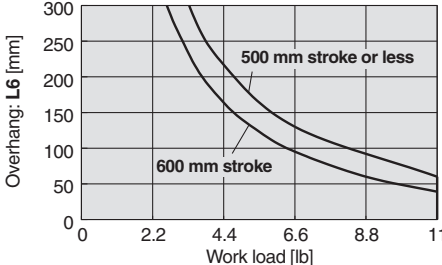

T1 : Acceleration time [s]
    Time until reaching the set speed
T2 : Constant speed time [s]
    Time while the actuator is operating at a constant speed
T3 : Deceleration time [s]
    Time from the beginning of the constant speed operation to stop
T4 : Settling time [s]
    Time until in position is completed

Step 3 **Check the guide moment.**

Mep

m

L2
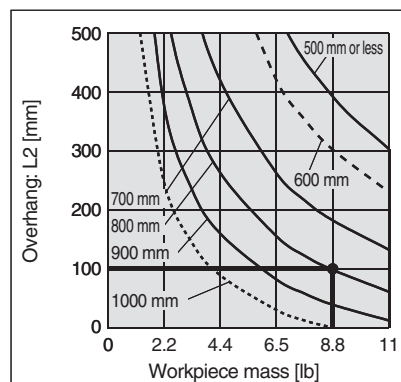

Based on the above calculation result, the LEL25LT-500 is selected.

Note 1) Strokes shown in ( ) are produced upon receipt of order.
Note 2) Speed is changed by the work load. Check "Speed–Work Load Graph (Guide)" on page 3. The work load is changed by the stroke and work load mounting condition.
Check "Dynamic Allowable Moment" graph on page 2. Furthermore, if the cable length exceeds 5 m, then it will decrease by up to 10% for each 5 m.
Note 3) Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both the stroke direction and a perpendicular direction to the stroke. (The test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz, when the actuator was tested in both stroke direction and a perpendicular direction to the stroke. (The test was performed with the actuator in the initial state.)
Note 4) Allowable external resistance is the allowable resistance when flexible moving tube or similar is used.
Note 5) Power consumption (including the controller) is for when the actuator is operating.
Note 6) Standby power consumption when operating (including the controller) is for when the actuator is stopped in the set position during operation.
Note 7) Momentary max. power consumption (including the controller) is for when the actuator is operating. This value can be used for the selection of the power supply.
Note 8) With lock only
Note 9) For an actuator with lock, add the power consumption for the lock.

SMC

Series LEL
Electric Actuator/Guide Rod Slider
Specific Product Precautions 1

Be sure to read before handling. Refer to back cover for Safety Instructions and the Operation Manual for Electric Actuator Precautions.
Please download it via our website, http://www.smcworld.com

Design

⚠ Caution

1. Do not apply a load in excess of the operating limit.

A product should be selected based on the maximum load and allowable moment. If the product is used outside of the operating limit, eccentric load applied to the guide will become excessive and have adverse effects such as creating play at the guide, degraded accuracy and shortened product life.

2. Do not use the product in applications where excessive external force or impact force is applied to it.

This can cause failure.

3. Because of the guide mechanism type, vibration that comes from an external source may be introduced into the workpiece during operation. Do not use this product in a location where vibration is not allowed.

Handling

⚠ Caution

1. Set the position determination width in the step data to at least 1.

Otherwise, completion signal of in position may not be output.

2. INP output signal

1) Positioning operation
   When the product comes within the set range by step data [In position], the INP output signal will be turned on.
   Initial value: Set to [1] or higher.

Handling

⚠ Caution

3. Never hit at the stroke end other than returning to the original position.

The internal stopper can be broken.

4. The positioning force should be the initial value.

If the positioning force is set below the initial value, it may cause an alarm.

5. Actual speed of the product can be changed by load.

When selecting a product, check the catalog for the instructions regarding selection.

6. Do not apply a load, impact or resistance in addition to a transferred load during returning to the original position.

Otherwise, the original position can be displaced since it is based on detected motor torque.

7. Do not dent, scratch or cause other damage to the body and table mounting surfaces.

It may cause a loss of parallelism in the mounting surfaces, looseness in the guide unit, an increase in sliding resistance or other problems.

8. When attaching a workpiece, do not apply strong impact or large moment.

If an external force over the allowable moment is applied, it may cause looseness in the guide unit, an increase in sliding resistance or other problems.

9. Keep the flatness of mounting surface 0.2 mm or less.

Insufficient flatness of a workpiece or base mounted on the body of the product can cause play at the guide and increased sliding resistance.

10. When mounting the product, keep the 40 mm or more for bending the cable.

11. Do not hit the table with the workpiece in the positioning operation and positioning range.

12. Hold by the end plates when moving the body. Do not hold the belt cover.

SMC

Be sure to read before handling. Refer to back cover for Safety Instructions and the Operation Manual for Electric Actuator Precautions. Please download it via our website, http://www.smcworld.com

Handling

⚠Caution

13. When mounting the product, use screws with adequate length and tighten them with adequate torque.
Tightening the screws with a higher torque than recommended may malfunction, whilst the tightening with a lower torque can cause the displacement of the mounting position or in extreme conditions the actuator could become detached from its mounting position.

Body fixed

ø**A**

L
Model	Bolt	ø**A** [mm]	**L** [mm]
LEL25	M6	6.6	35.5

Workpiece fixed

L

Model	Bolt	Max. tightening torque [lbf·ft]	**L** (Max. screw-in depth) [mm]
LEL25	M5 x 0.8	0.67	8

To prevent the workpiece fixing bolts from touching the body, use bolts that are 0.5 mm or shorter than the maximum screw-in depth. If long bolts are used, they can touch the body and cause a malfunction, etc.

14. Do not operate by fixing the table and moving the actuator body.

15. Belt drive actuator cannot be used for vertically mounted applications.

16. Check the specifications for the minimum speed of each actuator.

Otherwise, unexpected malfunctions, such as knocking, may occur.

17. In the case of the belt driven actuator, vibration may occur during operation at speeds within the actuator specification, this could be caused by the operating conditions. Change the speed setting to a speed that does not cause vibration.

Maintenance

⚠Warning

Maintenance frequency

Perform maintenance according to the table below.

Frequency	Appearance check	Internal check	Belt check
Inspection before daily operation	○	—	—
Inspection every 6 months/1000 km/ 5 million cycles*	○	○	○

∗ Select whichever comes sooner.

● **Items for visual appearance check**

1. Loose set screws, Abnormal dirt
2. Check of flaw and cable joint
3. Vibration, Noise

● **Items for internal check**

1. Lubricant condition on moving parts.
2. Loose or mechanical play in fixed parts or fixing screws.

● **Items for belt check**

Stop operation immediately and replace the belt when belt appear to be below. Further, ensure your operating environment and conditions satisfy the requirements specified for the product.

a. Tooth shape canvas is worn out.
Canvas fiber becomes fuzzy. Rubber is removed and the fiber becomes whitish. Lines of fibers become unclear.

b. Peeling off or wearing of the side of the belt
Belt corner becomes round and frayed thread sticks out.

c. Belt partially cut
Belt is partially cut. Foreign matter caught in teeth other than cut part causes flaw.

d. Vertical line of belt teeth
Flaw which is made when the belt runs on the flange.

e. Rubber back of the belt is softened and sticky.

f . Crack on the back of the belt

IN0 to IN5	Step data specified Bit No. (Input is instructed in the combination of IN0 to 5.)
SETUP	Instruction to return to the original position
HOLD	Operation is temporarily stopped
DRIVE	Instruction to drive
RESET	Alarm reset and operation interruption
SVON	Servo ON instruction
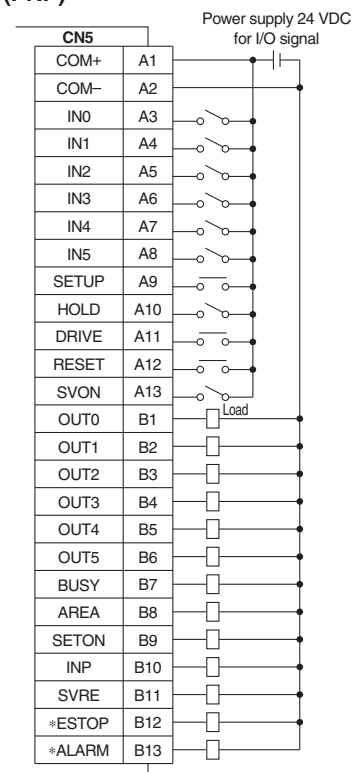

Output Signal

Name	Details
OUT0 to OUT5	Outputs the step data no. during operation
BUSY	Outputs when the actuator is moving
AREA	Outputs within the step data area output setting range
SETON	Outputs when returning to the original position
INP	Outputs when target position or target force is reached (Turns on when the positioning or pushing is completed.)
SVRE	Outputs when servo is on
*ESTOP Note)	Not output when EMG stop is instructed
*ALARM Note)	Not output when alarm is generated

Note) Signal of negative-logic circuit (N.C.)

Step Data Setting

Step data setting for positioning

In this setting, the actuator moves toward and stops at the target position. The following diagram shows the setting items and operation. The setting items and set values for this operation are stated below.
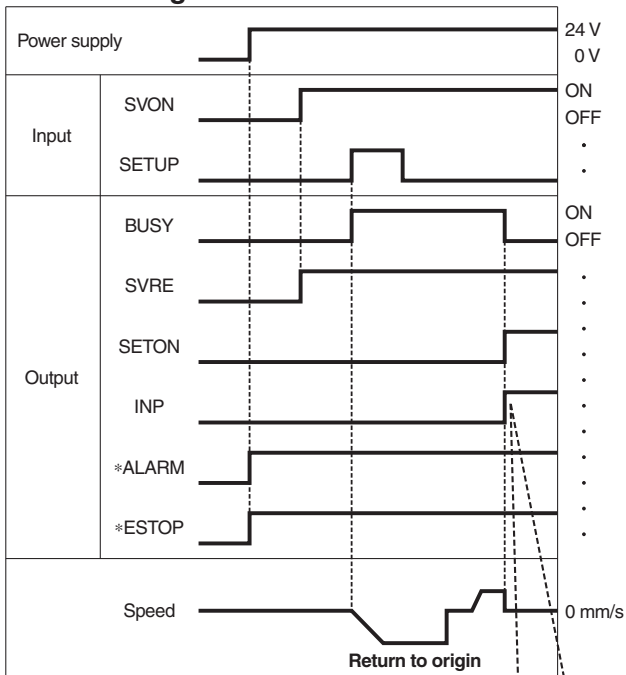

Step Data (Positioning)

Necessity	Item	Details
◎	Movement method	When the absolute position is required, set Absolute. When the relative position is required, set Relative.
◎	Speed	Transfer speed to the target position
◎	Position	Target position
◎	Acceleration	Parameter which defines how rapidly the actuator reaches the speed set. The higher the set value, the faster it reaches the speed set.
◎	Deceleration	Parameter which defines how rapidly the actuator comes to stop. The higher the set value, the quicker it stops.
◎	Pushing force	Set 0. (If values 1 to 100 are set, the operation will be changed to the pushing operation.)
—	Trigger LV	Setting is not required.
—	Pushing speed	Setting is not required.
○	Positioning force	Max. torque during the positioning operation (No specific change is required.)
○	Area 1, Area 2	Condition that turns on the AREA output signal.
○	In position	Condition that turns on the INP output signal. When the actuator enters the range of [in position], the INP output signal turns on. (It is unnecessary to change this from the initial value.) When it is necessary to output the arrival signal before the operation is completed, make the value larger.

SMC

Signal Timing

Return to Origin

|		
Power supply		24 V / 0 V
Input	SVON	ON / OFF
	SETUP	
Output	BUSY	ON / OFF
	SVRE	
	SETON	
	INP	
	∗ALARM	
	∗ESTOP	
	Speed	0 mm/s

Return to origin

If the actuator is within the "in position" range of the basic parameter, INP will be turned ON, but if not, it will remain OFF.

"∗ALARM" and "∗ESTOP" are expressed as negative-logic circuit.

Positioning Operation

Scan the step data no.

Input	IN	ON / OFF
	DRIVE	15 ms or more
Output	OUT	ON / OFF
	BUSY	
	INP	
	Speed	0 mm/s

Output the step data no.

Positioning operation

If the actuator is within the "in position" range of the step data, INP will be turned ON, but if not, it will remain OFF.

∗ "OUT" is output when "DRIVE" is changed from ON to OFF.
(When power supply is applied, "DRIVE" or "RESET" is turned ON or "∗ESTOP" is turned OFF, all of the "OUT" outputs are turned OFF.)

HOLD

Input	HOLD	ON / OFF
Output	BUSY	ON / OFF
	Speed	0 mm/s

Slow-down starting point

HOLD during the operation

∗ When the actuator is in the positioning range in the pushing operation, it does not stop even if HOLD signal is input.

Reset

Alarm reset

Input	RESET	ON / OFF
Output	OUT	ON / OFF
	∗ALARM	ON / OFF

Alarm out
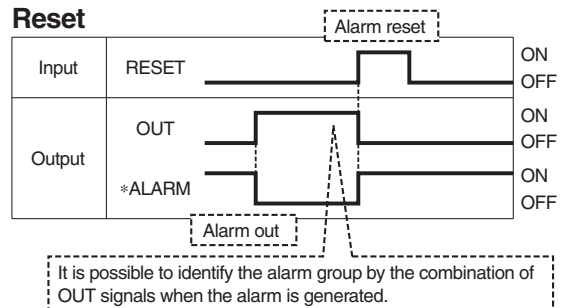

It is possible to identify the alarm group by the combination of OUT signals when the alarm is generated.

"∗ALARM" is expressed as negative-logic circuit.

Contents

① **Controller setting software (CD-ROM)**

② **Communication cable**

③ **USB cable**
   **(Cable between the PC and the conversion unit)**

Hardware Requirements

PC/AT compatible machine installed with Windows XP and equipped with USB1.1 or USB2.0 ports.

∗ Windows® and Windows XP® are registered trademarks of Microsoft Corporation.

Screen Example

### Easy mode screen example

Normal mode screen example

Easy operation and simple setting
● Allowing to set and display actuator step data such as position, speed, force, etc.
● Setting of step data and testing of the drive can be performed on the same page.
● Can be used to jog and move at a constant rate.

Detailed setting
● Step data can be set in detail.
● Signals and terminal status can be monitored.
● Parameters can be set.
● JOG and constant rate movement, return to origin, test operation and testing of forced output can be performed.

Example: Enter "LEL25MT-100" for the
LEL25MT-100B-R36N3.

∗ **When controller equipped type (-□1N□/-□1P□) is selected when ordering the LE series, you do not need to order this controller.**

The controller is sold as single unit after the compatible actuator is set.

Confirm that the combination of the controller and the actuator is correct.

∗ Refer to the operation manual for using the products. Please download it via our website, http://www.smcworld.com

Specifications

Basic Specifications

Item	Specifications
Compatible motor	Step motor (Servo/24 VDC)
Power supply Note 1)	Power supply voltage: 24 VDC ±10% Max. current consumption: 3 A (Peak 5 A) Note 2) [Including the motor drive power, control power supply, stop, lock release]
Parallel input	6 inputs (Photo-coupler isolation)
Parallel output	6 outputs (Photo-coupler isolation)
Stop points	14 points (Position number 1 to 14(E))
Compatible encoder	Incremental A/B phase (800 pulse/rotation)
Serial communication	RS485 (Modbus protocol compliant)
Memory	EEPROM
LED indicator	LED (Green/Red) one of each
7-segment LED display Note 3)	1 digit, 7-segment display (red) Figures are expressed in hexadecimal ("10" to "15" in decimal number are expressed as "A" to "F")
Lock control	Forced-lock release terminal Note 4)
Cable length [m]	I/O cable: 5 or less Actuator cable: 20 or less
Cooling system	Natural air cooling
Operating temperature range	32 to 104°F (0 to 40°C) (No freezing)
Operating humidity range [%RH]	90 or less (No condensation)
Storage temperature range	14 to 140°F (–10 to 60°C) (No freezing)
Storage humidity range [%RH]	90 or less (No condensation)
Insulation resistance [MΩ]	Between the housing (radiation fin) and SG terminal 50 (500 VDC)
Weight	4.6 oz (130 g)

Note 1) Do not use the power supply of "inrush current prevention type" for the controller input power supply.
Note 2) The power consumption changes depending on the actuator model. Refer to the each actuator's operation manual etc. for details.
Note 3) "10" to "15" in decimal number are displayed as follows in the 7-segment LED.

Decimal display	10	11	12	13	14	15
Hexadecimal display	A	b	c	d	E	F

Note 4) Applicable to non-magnetizing lock.

Specific Product Precautions

⚠ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of **"Caution," "Warning"** or **"Danger."** They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

⚠ **Caution:** **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

⚠ **Warning:** **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

⚠ **Danger :** **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

*1) ISO 4414: Pneumatic fluid power – General rules relating to systems.
ISO 4413: Hydraulic fluid power – General rules relating to systems.
IEC 60204-1: Safety of machinery – Electrical equipment of machines.
(Part 1: General requirements)
ISO 10218-1: Manipulating industrial robots - Safety.
etc.

⚠Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.
Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.
The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.
1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.
1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

⚠Caution

1. The product is provided for use in manufacturing industries.
The product herein described is basically provided for peaceful use in manufacturing industries.
If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.
If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".
Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered.*2)
Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.

2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.

3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

*2) **Vacuum pads are excluded from this 1 year warranty.**
A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.

2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

⚠ **Safety Instructions** | Be sure to read "Handling Precautions for SMC Products" (M-E03-3) before using.
